Aboriginal Astronomy Guide:

Indigenous Astronomy Kaia Stonebrook, AI, 2025-03-29 Indigenous Astronomy reveals the sophisticated astronomical knowledge of indigenous societies worldwide challenging the notion that scientific inquiry is solely a Western phenomenon. For generations celestial observations were integral to agriculture, ceremonies, and navigation demonstrating a profound connection between these cultures and the cosmos. The book highlights how indigenous communities used the stars to time planting seasons and navigate vast distances showcasing their advanced understanding of celestial movements. The book progresses through an introduction to archaeoastronomy and ethnoastronomy followed by detailed case studies from various geographical regions. These studies examine the practical applications of astronomical knowledge such as predicting weather patterns and managing resources. Further, the text explores how celestial events shaped social structures and belief systems emphasizing the cultural significance of astronomy. The book's approach combines scientific rigor with cultural sensitivity, making it a valuable resource for those interested in the history of science, cultural preservation, and the diverse ways humans have understood the universe.

Anthropocene Cosmographies James George Lowder, 2026-01-29 This book explores relationships between humans and outer space through a geographical lens in the context of the Anthropocene. Presenting a bold and diverse engagement with outer space, the book expands geographical understandings of outer space and reflects upon humankind's place in the cosmos all the while shedding light on the linkages between human life and cosmic processes. Drawing upon literature from across the social sciences, the book offers an innovative interdisciplinary examination of outer space that is grounded in geographic thinking. By delving into a range of materialities and milieus, it unpacks how outer space is framed, encountered, and perceived by a variety of social and cultural actors. A new materialist methodology combined with a mixed methods approach is used to investigate meteorites, Dark Sky Parks, and science fiction films, an effort that invokes deep pasts, embodied presents, and speculative futures. In doing so, the book reveals the interrelatedness of human and cosmos whilst unsettling the Anthropocene as a bounded and contained planetary condition. The interdisciplinary nature of this book makes it appealing for anyone engaging with outer space and planetary thinking. This book will be of particular use to scholars and students in geography and the social studies of outer space, as well as those with an interest in the Anthropocene, new materialism, and more than human studies.
