According to conventional wisdom, building a green home is an expensive endeavor. The standard approach treats green as an add on, tacking premium products, finishes and equipment onto a traditional home design. As a result, many green home projects end up over budget or fail to achieve their environmental and performance goals. *Green Home Building* explodes the myth that green homes have to cost more. Using proven methods based on applied building science, the authors show how to lower base construction costs to provide funding for high performance upgrades. Achieve a net zero energy home including zeroing water waste, carbon and associated costs within fifteen years. Live affordably into the future despite anticipated rising costs for fuel, water, materials, taxes and health care. This comprehensive guide to building green on any budget defines the strategies that maximize the return on green investments. Written for anyone who has ever been swayed by the argument that the price tag limits how green a home can be. *Green Home Building*

Energy Efficiency in Buildings José Manuel Andújar,Sergio Gómez Melgar,2020-04-28 Buildings are one of the main causes of the emission of greenhouse gases in the world Europe alone is responsible for more than 30% of emissions or about 900 million tons of CO2 per year Heating and air conditioning are the main cause of greenhouse gas emissions in buildings Most buildings currently in use were built with poor energy efficiency criteria or depending on the country and the date of construction none at all Therefore regardless of whether construction regulations are becoming stricter the real challenge nowadays is the energy rehabilitation of existing buildings It is currently a priority to reduce or ideally eliminate the waste of energy in buildings and at the same time supply the necessary energy through renewable sources The first can be achieved by improving the architectural design construction methods and materials used as well as the efficiency of the facilities and systems the second can be achieved through the integration of renewable energy wind solar geothermal etc in buildings In any case regardless of whether the energy used is renewable or not the efficiency must always be taken into account The most profitable and clean energy is that which is not consumed **Engineering Softwhere** ,1985 ASHRAE Journal ,1993 Energy Technology XI Richard F.
