Teaching Undergraduate Science Linda C. Hodges, 2023-07-03

This book is written for all science or engineering faculty who have ever found themselves baffled and frustrated by their undergraduate students lack of engagement and learning. The author, an experienced scientist, faculty member and educational consultant addresses these issues with the knowledge of faculty interests, constraints and day to day concerns in mind. Drawing from the research on learning, she offers faculty new ways to think about the struggles their science students face. She then provides a range of evidence based teaching strategies that can make the time faculty spend in the classroom more productive and satisfying.

Linda Hodges reviews the various learning problems endemic to teaching science, explains why they are so common and persistent, and presents a digest of key ideas and strategies to address them based on the research she has undertaken into the literature on the cognitive sciences and education. Recognizing that faculty have different views about teaching, different comfort levels with alternative teaching approaches and are often pressed for time, Linda Hodges takes these constraints into account by first offering a framework for thinking purposefully about course design and teaching choices and then providing a range of strategies to address very specific teaching barriers, whether it be students' motivation, engagement in class, ability to problem solve, their reading comprehension or laboratory research or writing skills. Except for the first and last chapters, the other chapters in this book stand on their own, i.e. can be read in any order and address a specific challenge students have in learning and doing science. Each chapter summarizes the research explaining why students struggle and concludes by offering several teaching options categorized by how easy or difficult they are to implement. Some, for example, can work in a large lecture class without a great expenditure of time, others may require more preparation and a more adventurous approach to teaching. Each strategy is accompanied by a table categorizing its likely impact, how much time it will take in class or out and how difficult it will be to implement. Like scientific research, teaching works best when faculty start with a goal in mind, plan an approach, building on the literature, use well tested methodologies and analyze results for future trials. Linda Hodges' message is that with such intentional thought and a bit of effort, faculty can succeed in helping many more students gain exciting new skills and abilities, whether those students are potential scientists or physicians or entrepreneurs. Her book serves as a mini compendium of current research as well as a protocol manual, a readily accessible guide to the literature, the best practices known to date and a framework for thinking about teaching.

The Role of Criticism in Understanding Problem Solving Samuel Fee, Brian Belland, 2012-05-26

In 1991 Denis Hlynka and John Belland released *Paradigms Regained*, a well received reader for graduate students in the field of educational technology. *The Role of Criticism in Understanding Problem Solving* updates some of those ideas initially proposed in *Paradigms Regained* and extends the

conversation into the contemporary discourse regarding problem based learning PBL Paradigms proposed the idea of criticism as a third method for the conduction of educational research the first two being qualitative and qualitative The concept of criticism as a tool for research is not well established in educational technology although it is well established in other educational research traditions such as Curriculum Studies Unfortunately it is not always clear how criticism can be applied This book views criticism as a way to step back and look at an educational intervention within educational technology through a particular critical lens Criticism is viewed as a valuable approach to guiding meta analyses and theoretical studies serving to prevent the proverbial spinning of the wheels that often happens in educational research By indicating new potential research questions and directions criticism approaches can invigorate educational research This book revisits the ideals of criticism in order to establish their usefulness for studying educational technology interventions to support problem based learning First a few foundational chapters set the stage for the conversations on criticism Then the role criticism can play in enhancing analysis and interpretation of the PBL literature is explored Finally case studies addressing the central concepts of the text are presented and dissected This book represents a complete overhaul and rethinking of the use of criticism as a method for understanding and furthering the research area of PBL within the field of Educational technology

The Programme for International Student Assessment (PISA) is a highly influential instrument for monitoring the quality of education systems and provides a strong evidence base for informed policy making and education research. PISA also has a proven potential to trigger reforms and stimulate stakeholder involvement in the process. Notwithstanding the importance of its ranking, the full strength of PISA unfolds when data it delivers is utilised in the national policy domain. Linking PISA outcomes and policy choices and monitoring the impact on education quality is thereby a demanding task which requires sound analytical capacity.

and also knowledge of the strengths and weaknesses of the respective education system The OECD Directorate for Education addresses the demand of non member economies for policy support in understanding and analysing PISA data in the broader context of education system management and policy formulation The present report was prepared to help the authorities of the Kyrgyz Republic better understand the reasons for the dramatically low performance of Kyrgyz students in the 2006 PISA survey despite significant resources and efforts invested in education by schools parents and government The report reveals that a number of policy areas are in need of urgent attention and recommends ways to close the currently existing gap between aspirations and education reform achievement
