Answer: These types of branching mechanisms include the if-else statement, the multi-way if-else statement, and the switch statement. An if-else statement chooses between two alternative statements based on the value of a Boolean expression. If you only want to perform an action if a certain condition is true, then the else part of an if-else statement can be omitted. A multi-way if-else statement allows several conditions to be evaluated. The first condition that evaluates to true, is the branch that is executed. The switch statement is another multi-selection branching mechanism. A switch evaluates a controlling expression and executes the statements in the matching case block.
