**Ecotoxicology** Erik Jorgensen,2010-04-16 Ecotoxicology offers an overview of current ecotoxicological problems It includes basic ecotoxicological concepts as well as information about chemicals and toxic substances that may cause harmful effects on the ecosystem and its living components The book with a total of 48 chapters is divided into three parts The first part includes the basic concepts of ecotoxicology starting with an introductory chapter on ecotoxicology as a subdiscipline of ecology assessment on ecotoxicological effects and risk and properties and effects of toxic chemicals These topics are further discussed throughout the book along with nomenclature focal topics and the history of ecotoxicology The two remaining parts tackle harmful properties and harmful chemicals The second part also covers bioaccumulation bioavailability biodegradability biodegradation and biomagnification It also provides models for ecotoxicological populations ecosystems and landscapes and on food web bioaccumulation Chemicals including benzene copper lead nitrogen phenols pheromones phthalates plutonium and uranium are covered in separate chapters in the final part This book will be of great value to ecologists ecotoxicologists and environmental managers Provides an overview of the theory and application of global ecology International focus and range of ecosystems makes Ecotoxicology an indispensable resource to scientists Based on the bestselling Encyclopedia of Ecology Full color figures and tables support the text and aid in understanding **Science in Your World: Teacher edition** Jay K. Hackett,1991 **Tudor Times** Paul Flux,2001 **Nature-Friendly Communities** Chris Duerksen,Cara Snyder,2013-04-09 Nature Friendly Communities presents an authoritative and readable overview of the

successful approaches to protecting biodiversity and natural areas in America's growing communities. Addressing the crucial issues of sprawl, open space and political realities, Chris Duerksen and Cara Snyder explain the most effective steps that communities can take to protect nature. The book documents the broad range of benefits including economic impacts resulting from comprehensive biodiversity protection efforts, identifies and disseminates information on replicable best community practices, establishes benchmarks for evaluating community biodiversity protection programs. Nine comprehensive case studies of communities explain how nature protection programs have been implemented. From Austin and Baltimore to Tucson and Minneapolis, the authors explore how different cities and counties have taken bold steps to successfully protect natural areas. Examining program structure and administration, land acquisition strategies and sources of funding, habitat restoration programs, social impacts, education efforts and overall results, these case studies lay out perfect examples that other communities can easily follow. Among the case study sites are Sanibel Island, Florida, Austin, Texas, Baltimore County, Maryland, Charlotte Harbor, Florida, and Teton County, Wyoming. Nature Friendly Communities offers a useful overview of the increasing number of communities that have established successful nature protection programs and the significant benefits those programs provide. It is an important new work for public officials, community activists and anyone concerned with understanding or implementing local or regional biodiversity protection efforts.
