MAP READING

SIX-FIGURE GRID REFERENCE

- Grid References are used to locate places of things on a map. There are types of grid lines, Eastings; these are vertical lines on the map and derive their name from each line number increasing in value towards the east.
- Northings are the horizontal lines on a map that derive their name because each line number increases in value towards the north.
- When writing a grid reference always start with the eastings
- To find the six-figure grid reference divide the grid square into 10 equal squares.
- You calculate it by first counting the number of squares horizontally and then the number of squares under the place on the map.

Direction

- Direction is the relative position of one object on a map to another. Direction is always given using the 16 points on a compass.

- When finding the direction, you find the point of origin first. And make the compass there.
