

remotely at the starter, with a special jumper cable or other means, the primary distributor lead must be disconnected from the negative post on the coil and the ignition switch must be in the "ON" position. Failure to do this will result in a damaged grounding circuit in the ignition switch.

3. Crank engine through at least four compression strokes to obtain highest possible reading.
4. Check and record compression of each cylinder.
5. If one or more cylinders read low or uneven, inject about a tablespoon of engine oil on top of pistons in low reading cylinders (through spark plug post). Crank engine several times and recheck compression.
 - If compression comes up but does not necessarily reach normal, rings are worn.
 - If compression does not improve, valves are burnt, sticking or not seating properly.
 - If two adjacent cylinders indicate low compression and injecting oil does not increase compression, the cause may be a head gasket leak between the cylinders. Engine coolant and/or oil in cylinders could result from this defect.

NOTE: If a weak cylinder cannot be located with the compression check, see "Cylinder Balance Test" under "Additional Checks and Adjustments" in this section.

Service and Install Spark Plugs (Fig. 2)

1. Inspect each plug individually for badly worn electrodes, glazed, broken or blistered porcelain and replace plugs where necessary. Refer to spark plug diagnosis information presented in Section 6V for an analysis of plug conditions.
2. Clean serviceable spark plugs thoroughly, using an abrasive-type cleanser such as sand blast. File the center electrode flat.
3. Inspect each spark plug for make and heat range. All plugs must be of the same make and number.
4. Adjust spark plug gaps to specifications using a round feeler gauge.

Fig. 1 - Checking Compression

Fig. 2 - Spark Plug Detail

CAUTION: Never bend the center electrode to adjust gap. Always adjust by bending ground or side electrode.

5. If available, test plugs with a spark plug tester.
6. Inspect spark plug hole threads and clean before installing plugs. Corrosion deposits can be removed with a 14 mm. x 1.25 SAE spark plug tap (available through local jobbers) or by using a small wire brush in an electric drill. (Use grease on tap to catch chips.)
