Coppi,Sergio Bolasco,1989 This book collects together 45 papers covering various aspects of the analysis of multiway data arrays Mathematical properties of three way and multiway arrays are investigated and their utilization for the statistical interpretation of complex data sets is emphasized The volume is divided into 5 chapters A specific introduction to each chapter has been prepared by the Editorial Board Different methods of analysis are considered including longitudinal and multimode factor analysis generalized canonical analysis multidimensional scaling multiway classification techniques model based approaches The reader can find many original contributions to this area as well as interesting applications in several fields of research such as psychology economics sociology and bio medicine Modern Psychometrics with R Patrick

Mair,2018-09-20 This textbook describes the broadening methodology spectrum of psychological measurement in order to meet the statistical needs of a modern psychologist The way statistics is used and maybe even perceived in psychology has drastically changed over the last few years computationally as well as methodologically R has taken the field of psychology by storm to the point that it can now safely be considered the lingua franca for statistical data analysis in psychology The goal of this book is to give the reader a starting point when analyzing data using a particular method including advanced versions and to hopefully motivate him or her to delve deeper into additional literature on the method Beginning with one of the oldest psychometric model formulations the true score model Mair devotes the early chapters to exploring confirmatory factor analysis modern test theory and a sequence of multivariate exploratory method Subsequent chapters present special techniques useful for modern psychological applications including correlation networks sophisticated parametric clustering techniques longitudinal measurements on a single participant and functional magnetic resonance imaging fMRI data In addition to using real life data sets to demonstrate each method the book also reports each method in three parts first describing when and why to apply it then how to compute the method in R and finally how to present visualize and interpret the results Requiring a basic knowledge of statistical methods and R software but written in a casual tone this text is ideal for graduate students in psychology Relevant courses include methods of scaling latent variable modeling psychometrics for graduate students in Psychology and multivariate methods in the social sciences **Modern Quantification Theory**

Shizuhiko Nishisato, Eric J. Beh, Rosaria Lombardo, Jose G. Clavel, 2021-07-22 This book offers a new look at well established quantification theory for categorical data referred to by such names as correspondence analysis dual scaling optimal scaling and homogeneity analysis These multiple identities are a consequence of its large number of properties that allow one to analyze and visualize the strength of variable association in an optimal solution The book contains modern quantification theory for analyzing the association between two and more categorical variables in a variety of applicative frameworks Visualization has attracted much attention over the past decades and given rise to controversial opinions One may consider variations of plotting systems used in the construction of the classic correspondence plot the biplot the Carroll Green Schaffer scaling or a new approach in doubled multidimensional space as presented in the book There are even arguments for no visualization at all The purpose of this book therefore is to shed new light on time honored graphical procedures with critical reviews new ideas and future directions as alternatives This stimulating volume is written with fresh new ideas from the traditional framework and the contemporary points of view It thus offers readers a deep understanding of the ever evolving nature of quantification theory and its practice Part I starts with illustrating contingency table analysis with traditional joint graphical displays symmetric non symmetric and the CGS scaling and then explores logically correct graphs in doubled Euclidean space for both row and column variables Part II covers a variety of mathematical approaches to the biplot strategy in graphing a data structure providing a useful source for this modern approach to graphical display Part II is also concerned with a number of alternative approaches to the joint graphical display such as bimodal cluster analysis and other statistical problems relevant to quantification theory
