

The background of the book cover is a photograph of ancient stone ruins. The ruins feature several large, semi-circular arches constructed from weathered, light-colored stone blocks. Some of the arches are partially collapsed or overgrown with green vegetation. The scene is set against a clear blue sky, with some green trees and bushes visible in the foreground and to the left.

treated wastewater will be required to meet future water supply needs Also changing climatic conditions will force water management systems to be more robust so that future water supply demands can be met as droughts become more intense and rainfall events become more intense A range of water management techniques are described and discussed in order to illustrate the methods for integrating these measures within the context of arid lands conditions Evolution of Water Supply Through the Millennia Andreas N. Angelakis, Larry W. Mays, Demetris Koutsoyiannis, Nikos Mamassis, 2012-04-14

Evolution of Water Supply Through the Millennia presents the major achievements in the scientific fields of water supply technologies and management throughout the millennia It provides valuable insights into ancient water supply technologies with their apparent characteristics of durability adaptability to the environment and sustainability A comparison of the water technological developments in several civilizations is undertaken These technologies are the underpinning of modern achievements in water engineering and management practices It is the best proof that the past is the key for the future Rapid technological progress in the twentieth century created a disregard for past water technologies that were considered to be far behind the present ones There are a great deal of unresolved problems related to the management principles such as the decentralization of the processes the durability of the water projects the cost effectiveness and sustainability issues such as protection from floods and droughts In the developing world such problems were intensified to an unprecedented degree Moreover new problems have arisen such as the contamination of surface and groundwater Naturally intensification of unresolved problems led societies to revisit the past and to reinvestigate the successful past achievements To their surprise those who attempted this retrospect based on archaeological historical and technical evidence were impressed by two things the similarity of principles with present ones and the advanced level of water engineering and management practices
