**Amgen** Gordon M. Binder,1998    **Science and Engineering for Grades 6-12** National Academies of Sciences, Engineering, and Medicine, National Academy of Engineering, Division of Behavioral and Social Sciences and Education, Board on Science Education, Committee on Science Investigations and Engineering Design Experiences in Grades 6-12, 2019-03-12

It is essential for today's students to learn about science and engineering in order to make sense of the world around them and participate as informed members of a democratic society. The skills and ways of thinking that are developed and honed through engaging in scientific and engineering endeavors can be used to engage with evidence in making personal decisions to participate responsibly in civic life and to improve and maintain the health of the environment as well as to prepare for careers that use science and technology. The majority of Americans learn most of what they know about science and engineering as middle and high school students. During these years of rapid change for students' knowledge, attitudes, and interests, they can be engaged in learning science and engineering through schoolwork that piques their curiosity about the phenomena around them in ways that are relevant to their local surroundings and to their culture. Many decades of education research provide strong evidence for effective practices in teaching and learning of science and engineering. One of the effective practices that helps students learn is to engage in science investigation and engineering design. Broad implementation of science investigation and engineering design and other evidence-based practices in middle and high schools can help address present day and future national challenges including broadening access to science and engineering for communities who have traditionally been underrepresented and improving students' educational and life experiences.

Science and Engineering for Grades 6-12: Investigation and Design at the Center revisits America's Lab Report: Investigations in High School Science in order to consider its discussion of laboratory experiences and teacher and school readiness in an updated context. It considers how to engage today's middle and high school students in doing science and engineering through an analysis of evidence and examples. This report provides guidance for teachers, administrators, creators of instructional resources, and leaders in teacher professional learning on how to support students as they make sense of phenomena, gather and analyze data, information, construct explanations and design solutions, and communicate reasoning to self and others during science investigation and engineering design. It also provides guidance to help educators get started with designing, implementing, and assessing investigation and design.

A New York Times Notable Book

As late as 1999 women who succeeded in science were called exceptional as if it were unusual for them to be so bright. They were exceptional not because they could succeed at science but because of all they accomplished despite the hurdles. Gripping one puts down the book inspired by the women's grit, tenacity, and brilliance.

Science Riveting Siddhartha Mukherjee, author of *The Gene* In 1963 a female student was attending a lecture given by Nobel Prize winner James Watson then tenured at Harvard. At nineteen she was struggling to define her future. She had given herself just ten

years to fulfill her professional ambitions before starting the family she was expected to have on the usual path of academic science was unimaginable but during that lecture young Nancy Hopkins fell in love with the promise of genetics Confidently believing science to be a pure meritocracy she embarked on a career In 1999 Hopkins now a noted molecular geneticist and cancer researcher at MIT divorced and childless found herself underpaid and denied the credit and resources given to men of lesser rank Galvanized by the flagrant favoritism Hopkins led a group of sixteen women on the faculty in a campaign that prompted MIT to make the historic admission that it had long discriminated against its female scientists The sixteen women were a formidable group their work has advanced our understanding of everything from cancer to geology from fossil fuels to the inner workings of the human brain And their work to highlight what they called 21st century discrimination a subtle stubborn often unconscious bias set off a national reckoning with the pervasive sexism in science From the Pulitzer Prize winning journalist who broke the story *The Exception* chronicles groundbreaking science and a history making fight for equal opportunity It is the excellent and infuriating *The New York Times* story of how this group of determined brilliant women used the power of the collective and the tools of science to inspire ongoing radical change And it offers an intimate look at the passion that drives discovery and a rare glimpse into the competitive hierarchical world of elite science and the women who dared to challenge it
