Carbon Neutrality, Social Media, Artificial Intelligence, volume II Rita Yi Man Li, Xuefeng Shao, James Crabbe, 2023-10-20 Carbon neutrality refers to net zero carbon emissions It can be achieved by reducing carbon emissions or increasing carbon adsorption The popularity of social media including Twitter YouTube and LinkedIn provides good channels for sharing relevant information and promoting sustainable carbon neutral living styles For example a motor company has launched social media challenges with Korean pop stars to raise awareness of carbon neutrality Social media provides real time information In Jakarta flood related tweet intensity during a flood peaked at about 900 tweets a minute during the floods of 2015 The tweets created real time maps that people sent a minute before Regarding government policies identification of problem areas is needed to help policymakers to resolve problems Machine learning can monitor these events by studying past records to know how countries and governments performed in a high risk event or environmental

crisis and this data can be used to provide future recommendations to governments for policy making. Additionally, AI can analyze online unstructured data and predict various scenarios of carbon emissions and adsorptions using structured data. The world of social media is a huge data source still yet to be fully optimized in science.

Nature-based Solutions for Urban Resilience and Human Health Bo Hong, Bin Jiang, Henrik Vejre, 2024-05-03. Climate change and rapid urbanization have significant impacts on biodiversity and ecosystem functions and services. Nature-based solutions (NBS) is an action to work with and enhance nature to solve social challenges and NBS is an umbrella concept for other mature nature-based approaches. Blue-green spaces (BGS) can provide a wide range of ecosystem services including mitigation of urban heat island effects, reduction of flooding, mitigation of air pollution and provision of recreational spaces, thereby promoting physical and mental health. Hence, NBSs can serve as a cost-effective climate mitigation and adaptation tool that contributes to additional co-benefits for ecosystem health and human well-being. Environmentalists, epidemiologists, ecologists, urban planners and policymakers have paid more attention to NBSs for urban resilience and human health. In this Research Topic, we hope to discuss these topics: 1. ecological exposure and health benefits; 2. climate adaptation and human health promotion possibilities by NBSs; 3. methodological and theoretical approaches as well as technologies of NBSs corresponding to urban resilience; 4. underlying pathways and potential mechanisms of NBSs in improving human health; and 5. policies and management for planning and design of the successful implementation of NBSs in relation to urban resilience and human health. This Research Topic focuses on but is not restricted to the following issues: Nature-based interventions for climate adaptation; Ecological exposure and physical and psychological health outcomes; Climate adaptation environmental policies and management; Theoretical and case-based studies on climate mitigation and adaptation by NBSs; Ecosystem service perspective on promoting urban resilience. This Research Topic welcomes the following types of manuscripts: Original Research; Hypothesis and Theory; Review and Perspective.
