## Passage + Questions

### Geography of Antarctica

Antarctica is a fascinating and unique continent located at the southernmost part of the Earth. It is the fifth largest continent, covering an area of about 14 million square kilometers. Antarctica is surrounded by the Southern Ocean, which is filled with icy cold waters.

One of the most distinct features of Antarctica is its extreme cold weather. It is the coldest place on Earth, with temperatures dropping as low as -89 degrees Celsius. Due to the freezing temperatures, Antarctica is covered in a thick layer of ice and snow. In fact, about 98% of the continent is covered in ice, making it the largest ice sheet in the world.

Antarctica is also home to the South Pole, which is the most southern point on Earth. The South Pole is located at the center of the continent and is marked by a special marker. It is a popular destination for scientists and researchers who come from all over the world to study the unique environment.

Despite its freezing temperatures and icy conditions, Antarctica is home to a surprisingly diverse range of wildlife. Many different species of animals can be found there, including penguins, seals, whales, and various types of birds. These animals have adapted to the harsh environment and have special features that help them survive, such as thick layers of blubber to keep them warm.

Antarctica is also known for its stunning landscapes and natural wonders. The continent is filled with towering icebergs, majestic glaciers, and beautiful mountains. The icebergs, which are large chunks of ice that have broken off from glaciers, come in many different shapes and sizes. Some are as tall as skyscrapers.

In conclusion, Antarctica is a fascinating continent with its extreme cold weather, unique wildlife, and stunning landscapes. It is a place like no other and continues to capture the imaginations of people all around the world.
