

# Strip Diagrams

A strip diagram is a useful tool you can use to help solve problems. You can draw a strip diagram for any problem using the four operations. You can use multiple strip diagrams to solve multi-step problems.

## Problem

Kelly is training for a race. She runs 5 miles a day during the week (Monday – Friday) and runs 10 miles on Saturday. If she wants to log 46 miles for the week, how many miles does she need to run on Sunday?

*Think:* In order to solve this problem you need to multiply, add, and subtract. You can make a strip diagram for each of these operations.

## Step 2: Addition

$n$	
25 (same as $m$ )	10

Let's have  $n$  represent the number of miles Kelly ran during the week (M – F) and on Saturday. We know she ran 25 M – F and 10 on Saturday.

$$\begin{aligned}n &= 25 + 10 \\n &= 35\end{aligned}$$

## Step 1: Multiplication

$m$				
5	5	5	5	5

Let's have  $m$  represent the number of miles Kelly ran Monday – Friday.

$$\begin{aligned}m &= 5 \times 5 \\m &= 25\end{aligned}$$

## Step 3: Subtraction

46	
35 (same as $n$ )	$s$

Let's have  $s$  represent the number of miles Kelly needs to run on Sunday. We know her total mileage for the week should be 46 and we know how much she ran Monday – Saturday so we just need to subtract to find  $s$ .

$$\begin{aligned}s &= 46 - 35 \\s &= 11\end{aligned}$$
