Radicals Reference Sheet

Radicals

What are Radicals?

Definition:
Radicals are the inverse of exponents - the opposite operation.

$$\sqrt[n]{x^n} = x$$

then $\sqrt[n]{x} = x^{\frac{1}{n}}$

The "index" of a radical is the number you would need to raise to the power of n , to get the quantity specified in the radical.

Operations with the Square Root:
When you multiply a square root, the indices must be the same. You can then multiply the numbers inside the square root.

Parts of the Radical:

Index — $\sqrt[n]{ }$
 $\sqrt[n]{x}$ — Radical
 x — Radical Number

The Radical and Exponent:
 $\sqrt[n]{x} = x^{\frac{1}{n}}$

A radical of a number can also be written as the number, raised to the power of one divided by the index.

Inherent Properties of Radicals:

The Product Rule:
 If the index of a number is equal to the index of that number:
 $\sqrt[n]{ab} = \sqrt[n]{a} \cdot \sqrt[n]{b}$
 $(\sqrt[n]{a})^n = a$

The Quotient Rule:
 If the index of a number is equal to the index of its index, in that number:
 When n is even: $\sqrt[n]{(ab)}^n = (ab)$
 When n is odd: $\sqrt[n]{(ab)}^n = (ab)$

Radicals of Numbers with Exponents:
 When n is even, and a is a positive number:
 $\sqrt[n]{a^m} = a^{\frac{m}{n}} = (\sqrt[n]{a})^m$

Exponents can be taken outside of the radical by dividing the power.

Operations with Radicals:

Product Rule:
 $\sqrt[n]{a} \cdot \sqrt[m]{b} = \sqrt[nm]{ab}$
 When two numbers are multiplied together inside a radical, then the radicals of each can be multiplied together for the same result.

Quotient Rule:
 $\sqrt[n]{\frac{a}{b}} = \frac{\sqrt[n]{a}}{\sqrt[n]{b}}$
 When two numbers are divided inside a radical, then the radicals of each can be divided instead, for the same result.

Rationalizing The Denominator:
 $\frac{a}{\sqrt{b}} = \frac{a}{\sqrt{b}} \cdot \frac{\sqrt{b}}{\sqrt{b}} = \frac{a\sqrt{b}}{b}$
 When the denominator of an expression is a radical, it can be made easier to work by multiplying the denominator by a rational number, using this process.

Perfect Squares:

- A perfect square is a number whose square root is a whole number.
- Perfect squares are rational numbers.

$$\sqrt{1} = 1, \sqrt{4} = 2, \sqrt{9} = 3, \sqrt{16} = 4$$

Rational and Whole Number Definitions:

Rational Numbers: are the following numbers, with no decimal or fraction part:
 Integers: $0, 1, 2, 3, 4, \dots$

Irrational Numbers: are numbers that can be written as a fraction of two integers. Irrationals are infinite numbers and never repeating.

John Locke 1632 1704 the English philosopher has had a wide ranging influence on modern political thought Locke's political philosophy is based on the premise that by nature human beings are equal and that therefore no one is under the authority of another unless by his own consent In Locke's view natural law constitutes and protects rights of life liberty and property His writings are a turning point in the theory of natural rights linking constitutionalism and toleration The impact of his ideas can be seen in the American constitution in the French Revolution and in the development of modern liberalism His theory of

property is a basis for modern discussion of the subject and its emphasis on labour as a source of value and entitlement forms the background for the later economics of both Adam Smith and Karl Marx. The articles contained in these volumes have been carefully selected in order to put Locke's work in a wider context. They explore various aspects of Locke's political theory and investigate his theories on property, natural law, the state of nature and toleration.
