Questions

Below is a list of questions to be addressed as a result of this requirements document:

Question	Outcome
What about Google Apps	• We think this is important, but not for version one. • We can look at this at a later stage. • 💡 It might be worth someone looking into a shared notification library to do this.
Are we supporting Blackberry?	• Again, not for initial version - but we haven't had much demand for this.
Should we have an offline mode?	• We've talked about the pros and cons. In brief: ➕ Seamless experience for customers, they won't notice if there is a connection issue ➕ Most of our competitors don't have this ➖ Could be expensive to build ❓ Should we spike this at a later sprint?

Not Doing

• Google Apps Authentication - out of scope, see above for details
• Blackberry support - we won't look at doing this, if demand picks up we can look at it.
• Native app. We are starting with a mobile web view first and get back to a native app depending on feedback that we get.
