Altivec Technology Programming Environments Manual:

The Computer Engineering Handbook Vojin G. Oklobdzija, 2019-07-05 After nearly six years as the field's leading reference the second edition of this award winning handbook reemerges with completely updated content and a brand new format The Computer Engineering Handbook Second Edition is now offered as a set of two carefully focused books that together encompass all aspects of the field In addition to complete updates throughout the book to reflect the latest issues in low power design embedded processors and new standards this edition includes a new section on computer memory and storage as well as several new chapters on such topics as semiconductor memory circuits stream and wireless processors and nonvolatile memory technologies and applications

Languages and Compilers for Parallel Computing

Larry Carter, Jeanne Ferrante, 2003-06-29 In August 1999 the Twelfth Workshop on Languages and Compilers for Parallel Computing (LCPC) was hosted by the Hierarchical Tiling Research group from the Computer Science and Engineering Department at the University of California San Diego (UCSD). The workshop is an annual international forum for leading research groups to present their current research activities and the latest results. It has also been a place for researchers and practitioners to interact closely and exchange ideas about future directions. Among the topics of interest to the workshop are language features, code generation, debugging, parallelization, communication and distributed shared memory libraries, distributed object systems, resource management systems, integration of compiler and runtime systems, irregular and dynamic applications, and performance evaluation. In 1999 the workshop was held at the International Relations Pacific Studies Auditorium and the San Diego Supercomputer Center at UCSD. Seventy seven researchers from Australia, England, France, Germany, Korea, Spain, and the United States attended the workshop, an increase of over 50% from 1998.

Encyclopedia of Parallel Computing

David Padua, 2014-07-08 Containing over 300 entries in an A-Z format, the Encyclopedia of Parallel Computing provides easy, intuitive access to relevant information for professionals and researchers seeking access to any aspect within the broad field of parallel computing. Topics for this comprehensive reference were selected, written, and peer reviewed by an international pool of distinguished researchers in the field. The Encyclopedia is broad in scope, covering machine organization, programming languages, algorithms, and applications. Within each area, concepts, designs, and specific implementations are presented. The highly structured essays in this work comprise synonyms, a definition and discussion of the topic, bibliographies, and links to related literature. Extensive cross references to other entries within the Encyclopedia support efficient user friendly searching for immediate access to useful information. Key concepts presented in the Encyclopedia of Parallel Computing include laws and metrics, specific numerical and non-numerical algorithms, asynchronous algorithms, libraries of subroutines, benchmark suites, applications, sequential consistency, and cache coherency. Machine classes such as clusters, shared memory multiprocessors, special purpose machines, and dataflow machines, specific machines such as Cray supercomputers, IBM's cell processor, and Intel's multicore machines, race detection, and auto parallelization, parallel
