**Integrability and Nonintegrability of Dynamical Systems** Alain Goriely, 2001 This invaluable book examines qualitative and quantitative methods for nonlinear differential equations as well as integrability and nonintegrability theory Starting from the idea of a constant of motion for simple systems of differential equations it investigates the essence of integrability its geometrical relevance and dynamical consequences Integrability theory is approached from different perspectives first in terms of differential algebra then in terms of complex time singularities and finally from the viewpoint of phase geometry for both Hamiltonian and non-Hamiltonian systems As generic systems of differential equations cannot be exactly solved the book reviews the different notions of nonintegrability and shows how to prove the nonexistence of exact solutions and/or a constant of motion Finally nonintegrability theory is linked to dynamical systems theory by showing how the property of complete integrability partial integrability or nonintegrability can be related to regular and irregular dynamics in phase space Contents Integrability An Algebraic Approach Integrability An Analytic Approach Polynomial and Quasi-Polynomial Vector Fields Nonintegrability Hamiltonian Systems Nearly Integrable Dynamical Systems Open Problems Readership Mathematical and theoretical physicists and astronomers and engineers interested in dynamical systems
