The Future of Scholarly Communication Deborah Shorley, Michael Jubb, 2013-03-23 Global thought leaders define the future of research communication Governments and societies globally agree that a vibrant and productive research community underpins a successful knowledge economy but the context mechanisms and channels of research communication are in flux As the pace of change quickens there needs to be analysis of new trends and drivers their implications and a future framework The editors draw together the informed commentary of internationally renowned experts from all sectors and backgrounds to define the future of research communication A comprehensive introduction by Michael Jubb is followed by two sections examining changing research behaviour and the roles and responsibilities of other key actors including researchers funders universities research institutes publishers libraries and users Key topics include Changing ways of sharing research in chemistry Supporting qualitative research in the humanities and social sciences Creative communication in a publish or perish culture Cybertaxonomy Coping with the data deluge Social media and scholarly communications The changing role of the publisher in the scholarly communications process Researchers and scholarly communications The changing role of the journal editor The view of the research funder Changing institutional research strategies The role of the research library The library users view This is essential reading for all concerned with the rapidly evolving scholarly communications landscape including researchers librarians publishers funders academics and HE institutions Readership Researchers librarians publishers funders academics and HE institutions *Access to Scientific Research* David J. Brown, 2015-11-13 The debate about access to scientific research raises questions about the current effectiveness of scholarly communication processes This book explores from an independent point of view the current state of the STM publishing market new publishing technologies and business models as well as the information habit of researchers the politics of research funders and the demand for scientific research as a public good The book also investigates the democratisation of science including how the information needs of knowledge workers outside academia can be embraced in future *Beyond open access: visions for open evaluation of scientific papers by post-publication peer review* Nikolaus Kriegeskorte, Diana Deca, A scientific publication system needs to provide two basic services access and evaluation The traditional publication system restricts the access to papers by requiring payment and it restricts the evaluation of papers by relying on just 2-4 pre publication peer reviews and by keeping the reviews secret As a result the current system suffers from a lack of quality and transparency of the peer review evaluation process and the only immediately available indication of a new paper's quality is the prestige of the journal it appeared in Open access is now widely accepted as desirable and is slowly beginning to become a reality However the second essential element evaluation has received less attention Open evaluation an ongoing post publication process of transparent peer review and rating of papers promises to address the problems of the current system However it is unclear how exactly such a system should be designed The evaluation system

steers the attention of the scientific community and thus the very course of science For better or worse the most visible papers determine the direction of each field and guide funding and public policy decisions Evaluation therefore is at the heart of the entire endeavor of science As the number of scientific publications explodes evaluation and selection will only gain importance A grand challenge of our time therefore is to design the future system by which we evaluate papers and decide which ones deserve broad attention So far scientists have left the design of the evaluation process to journals and publishing companies However the steering mechanism of science should be designed by scientists The cognitive computational and brain sciences are best prepared to take on this task which will involve social and psychological considerations software design and modeling of the network of scientific papers and their interrelationships This Research Topic in Frontiers in Computational Neuroscience collects visions for a future system of open evaluation Because critical arguments about the current system abound these papers will focus on constructive ideas and comprehensive designs for open evaluation systems Design decisions include Should the reviews and ratings be entirely transparent or should some aspects be kept secret Should other information such as paper downloads be included in the evaluation How can scientific objectivity be strengthened and political motivations weakened in the future system Should the system include signed and authenticated reviews and ratings Should the evaluation be an ongoing process such that promising papers are more deeply evaluated How can we bring science and statistics to the evaluation process e g should rating averages come with error bars How should the evaluative information about each paper e g peer ratings be combined to prioritize the literature Should different individuals and organizations be able to define their own evaluation formulae e g weighting ratings according to different criteria How can we efficiently transition toward the future system Ideally the future system will derive its authority from a scientific literature on community based open evaluation We hope that these papers will provide a starting point
