**Critical Appraisal of Physical Science as a Human Enterprise** Mansoor Niaz, 2009-02-07 It is generally believed that doing science means accumulating empirical data with no or little reference to the interpretation of the data based on the scientist's theoretical framework or presuppositions Holton 1969a has deplored the widely accepted myth of experimentalism according to which progress in science is presented as the inexorable result of the pursuit of logically sound conclusions from unambiguous experimental data Surprisingly some of the leading scientists themselves Millikan is a good example have contributed to perpetuate the myth with respect to modern science being essentially empirical that is carefully tested experimental facts free of a priori conceptions leading to inductive generalizations Based on the existing knowledge in a field of research a scientist formulates the guiding assumptions Laudan et al 1988 presuppositions Holton 1978 1998 and hardcore Lakatos 1970 of the research program that constitutes the imperative of presuppositions which is not abandoned in the face of anomalous data Laudan and his group consider the following paraphrase of Kant by Lakatos as an important guideline philosophy of science without history of science is empty Starting in the 1960s this historical school has attempted to redraw and replace the positivist or logical empiricist image of science that dominated for the first half of the twentieth century Among other aspects one that looms large in these studies is that of guiding assumptions and has considerable implications for the main thesis of this monograph Chapter 2

**Logical Empiricism and the Physical Sciences** Sebastian Lutz, Adam Tamas Tuboly, 2021-04-26 This volume has two primary aims to trace the traditions and changes in methods concepts and ideas that brought forth the logical empiricists philosophy of physics and to present and analyze the logical empiricists various and occasionally contrary ideas about the physical sciences and their philosophical relevance These original chapters discuss these developments in their original contexts and social and institutional environments thus showing the various fruitful conceptions and philosophies behind the history of 20th century philosophy of science Logical Empiricism and the Natural Sciences is divided into three thematic sections Part I surveys the influences on logical empiricism's philosophy of science and physics It features chapters on Maxwell's role in the worldview of logical empiricism on Reichenbach's account of objectivity on the impact of Poincaré on Neurath's early views on scientific method Frank's exchanges with Einstein about philosophy of physics and on the forgotten role of Kurt Gödel Part II focuses on specific physical theories including Carnap's and Reichenbach's positions on Einstein's theory of general relativity Reichenbach's critique of unified field theory and the logical empiricists' reactions to quantum mechanics The third and final group of chapters widens the scope to philosophy of science and physics in general It includes contributions on von Mises' frequentism Frank's account of concept formation and confirmation and the interrelations between Nagel's Feigl's and Hempel's versions of logical empiricism This book offers a comprehensive account of the logical empiricists' philosophy of physics It is a valuable resource for researchers interested in the history and philosophy of science philosophy of physics and the history of analytic philosophy
