Ristovska examines how human rights organizations are seeking to professionalize video activism through video production verification standards and training. The result she argues is a proxy profession that uses human rights videos to tap into journalism, the law, and political advocacy. Ristovska explains that this proxy profession retains some tactical flexibility in its use of video while giving up on the more radical potential and imaginative scope of video activism as a cultural practice. Drawing on detailed analysis of legal cases and videos as well as extensive interviews with staff members of such organizations as Amnesty International, Human Rights Watch, WITNESS, the International Criminal Tribunal for the former Yugoslavia (ICTY), and the International Criminal Court (ICC), Ristovska considers the unique affordances of video and examines the unfolding relationships among journalists, human rights organizations, activists, and citizens in global crisis reporting. She offers a case study of the visual turn in the law, describes advocacy and marketing strategies, and argues that the transformation of video activism into a proxy profession privileges institutional and legal spaces over broader constituencies for public good.

The Ethical Journalist Gene Foreman, 2015-05-18. This new edition of a well-regarded student-friendly textbook for journalism ethics has been extensively revised and updated to meet the needs of the 21st-century journalist working in the digital age. Educates aspiring journalists on ethical decision-making with coverage of key applied issues such as the principles of fairness and accuracy, the duty of verification, the role of social media, the problems of plagiarism, fabrication, and conflicts of interest, business issues that affect journalism ethics, and questions relating to source relationships, privacy, and deception in reporting. Includes extensive revisions to the majority of chapters as well as six new Point of View essays, eight new case studies, and a full glossary. Brings together the authoritative, engaging voice of a veteran journalist, the viewpoints of distinguished scholars, and print, broadcast, and digital practitioners, and insights from complex real-world case studies. Supplemented by an annually updated companion website with resources for teachers and students, including links to current articles discussing the subjects covered in each of the book's chapters, and a teachers' guide that offers sample syllabi, discussion guides, PowerPoint slides, sample quiz and exam questions, and links to audiovisual material.

Adjusting Free-growing Guidance Regarding Aspen Retention in the Cariboo-Chilcotin Teresa A. Newsome, Jean Heineman, 2016. In 2008, a Working Group that included British Columbia government staff, researchers, stewardship foresters, and wildlife habitat experts, a research consultant, and industry foresters was formed in the Cariboo Region of south-central British Columbia to determine how existing research concerning conifer x13 broadleaf competitive relationships could be used to suggest change to free-growing guidelines for that region. The objective was to adjust free-growing criteria concerning broadleaf tree presence in coniferous plantations while maintaining consistency with biological thresholds for conifer growth that had been determined by local research.

Preventing Chemical Weapons Michael Crowley, Malcolm Dando, Lijun Shang, 2018-08-20. The life and chemical sciences are in the midst of a period of rapid and revolutionary transformation that will undoubtedly bring societal benefits but also have potentially malign applications, notably in the

development of chemical weapons Such concerns are exacerbated by the unstable international security environment and the changing nature of armed conflict which could fuel a desire by certain States to retain and use existing chemical weapons as well as increase State interest in creating new weapons whilst a broader range of actors may seek to employ diverse toxic chemicals as improvised weapons Stark indications of the multi faceted dangers we face can be seen in the chemical weapons attacks against civilians and combatants in Iraq and Syria and also in more targeted chemical assassination operations in Malaysia and the UK Using a multi disciplinary approach and drawing upon an international group of experts this book analyses current and likely near future advances in relevant science and technology assessing the risks of their misuse The book examines the current capabilities limitations and failures of the existing international arms control and disarmament architecture notably the Chemical Weapons Convention in preventing the development and use of chemical weapons Through the employment of a novel Holistic Arms Control methodology the authors also look beyond the bounds of such treaties to explore the full range of international law international agreements and regulatory mechanisms potentially applicable to weapons employing toxic chemical agents in order to develop recommendations for more effective routes to combat their proliferation and misuse A particular emphasis is given to the roles that chemical and life scientists health professionals and wider informed activist civil society can play in protecting the prohibition against poison and chemical weapons and in working with States to build effective and responsive measures to ensure that the rapid scientific and technological advances are safeguarded from hostile use and are instead employed for the benefit of us all
