deception have been controversially discussed in the scientific community. It has been proposed to shift from the original idea of detecting deception per se to a more indirect approach that allows for determining whether a suspect has specific knowledge of crime related details. This so called Concealed Information Test is strongly linked to basic psychological concepts concerning memory, attention, orienting and response monitoring. Although research in this field has intensified with the advancement of neuroimaging techniques such as PET and fMRI in the last decade, basic questions on the psychological mechanisms underlying modulatory effects of deception and information concealment on behavioral, autonomic and brain responses are still poorly understood. This Research Topic brings together contributions from researchers in experimental psychology, psychophysiology and neuroscience focusing on the understanding of the broad concept of deception including the detection of concealed information with respect to basic research questions as well as applied issues. This Research Topic is mainly composed of original research articles but reviews and papers elaborating on novel methodological approaches have also been included. Experimental methods include but are not limited to behavioral, autonomic, electroencephalographic or brain imaging techniques that allow for revealing relevant facets of deception on a multimodal level. While this Research Topic primarily includes laboratory work, relevant issues for the field use of such methods are also discussed. *Handbook of Research on Mixed Methods Research in Information Science* Ngulube, Patrick, 2021-11-26. Mixed methods research is becoming prevalent in many fields yet little has been done to elevate mixed methods research in information science. A comprehensive picture of information science and its problems is needed to further understand and address the issues associated with it as well as how mixed methods research can be adapted and used. The Handbook of Research on Mixed Methods Research in Information Science discusses the quality of mixed methods studies and methodological transparency, sampling in mixed methods research and the application of theory in mixed methods research throughout various contexts. Covering topics such as the issues and potential directions for further research in mixed methods, this comprehensive major reference work is ideal for researchers, policymakers, academicians, librarians, practitioners, instructors and students.

Innovative Solutions For Next-Generation Fertilizers Mohamed Ait-El-Mokhtar, Marouane Baslam, Raffaella Maria Balestrini, 2025-10-24. The field of agricultural science is currently grappling with the challenge of feeding a projected global population of 10 billion people by 2050. This task is compounded by the anticipated decline in productivity of two thirds of worldwide agricultural land due to climate change and the intensification of agriculture which has led to soil degradation and reduced fertility. Current agricultural practices heavily rely on fertilizers to boost crop productivity but improper application can result in significant economic, environmental and social issues including nutrient runoff and increased greenhouse gas emissions. Recent studies have highlighted the need for sustainable intensification of agriculture emphasizing the importance of developing next generation fertilizers that are both efficient and environmentally friendly. Despite advancements there remains a critical gap in understanding and implementing innovative fertilizer technologies that can sustainably enhance

crop yields This research topic aims to explore and develop new and sustainable technologies for next generation fertilizers that can improve crop nutrition efficiency increase yields and promote sustainable agriculture while minimizing environmental impacts The primary objectives include investigating innovative approaches to fertilizer production understanding the molecular mechanisms of action and evaluating the potential of these new technologies to replace conventional fertilizers Key questions to be addressed include how these novel fertilizers can enhance nutrient use efficiency promote crop tolerance to various stresses and improve the nutritional quality of crops To gather further insights into the boundaries of next generation fertilizers we welcome articles addressing but not limited to the following themes Innovative approaches and advanced methods to produce and characterize next generation fertilizers e g rhizosphere microbiome engineering atmospheric nitrogen fixation enhanced efficiency fertilizers biodegradable coatings for controlled release Systems of bioactive based novel fertilizers including biostimulants nutrients signaling molecules and in organic molecules Development of next generation fertilizers for enhanced nutrient use efficiency NUE in crops Promoting crop tolerance to biotic and abiotic stresses using new fertilizers Synergies between the bioactivities of different fertilizers Improving crop nutritional quality and functionality using next generation fertilizers Understanding the molecular mechanisms of novel fertilizers in imparting stress tolerance and NUE in crops
