

CPR FOR ADULTS CHILDREN 8+ YEARS

Follow These Life-saving Steps To Safely Perform CPR In Emergencies

1

- Step 1: Observe the situation and attempt to wake the victim.**
- Ensure the scene is safe. Do not put yourself in danger.
 - If the victim appears to have been electrocuted, do not touch them.
 - If it is safe, gently tap the victim and ask loudly, "Are you all right?"
 - Do not shake the victim if you suspect a head or neck injury.

2

CALL 911

- Step 2: If the victim is unresponsive or not breathing:**
- Have a bystander call 911, or call yourself if no bystanders are present, and immediately proceed to the next step.
 - If possible, put the phone on speaker so the dispatcher can help you with 1. Checking for breathing, 2. Calling your previous location, 3. Providing guidance on performing CPR.
 - If the victim responds but is injured or needs medical assistance, a bystander must call 911 and monitor the victim's condition frequently.

3

— If you do not suspect a back or neck injury:
Place the victim on their back, shoulders facing up.
If the victim is face down and unresponsive, carefully roll them onto their back.

- Step 3: Immediately begin chest compressions.**
- Locate the middle of the chestbone for placing an imaginary line between the nipples.
 - Place the heel of one hand just below that line, then place the heel of the second hand on top, overlapping the hands.
 - Straighten your arms, lock your elbows, and lean over so your shoulders are directly above your hands.
 - Using the heels of your hands, push firmly straight down about 2 inches, but no more than 2.4 inches on the chest.
 - Release pressure completely between pushes, keeping your hands on the chest at all times.
 - Allow the chest to return to its normal position after each compression.
 - Avoid leaning on the chest between compressions.
 - Count aloud: "one and two and three..."
 - Push hard and fast, aiming for a rate of 100 to 120 compressions per minute.

IF TRAINED IN CPR

If you are not trained in CPR or are uncomfortable with rescue breathing, skip steps 4 and 5 and continue chest compressions at a rate of 100 to 120 compressions per minute until:

- An AED arrives and is ready for use.
- The victim starts to move, or
- Emergency personnel take over.

4

- Step 4: After 30 compressions — open the airway.**
- Open the airway by placing one hand on the victim's forehead and the other hand under the victim's chin, gently tilting the head back (head-tilt-chin-lift method).
 - If the victim is not breathing or only gasping, proceed to Step 5 for rescue breathing.

5

- Step 5: Begin rescue breathing after 30 compressions.**
- Maintain the open airway.
 - Pinch the victim's nose shut and cover their mouth with yours, creating an airtight seal (or use a mouth guard).
 - Give two full, slow rescue breaths. Each breath should last one second and cause the chest to rise.
 - Take a regular (not deep) breath between each rescue breath to avoid dizziness or hyperventilation.
 - Watch the chest. If it does not rise after the first breath, perform the head-tilt-chin-lift again before giving the second breath.

6

- Step 6: Repeat the cycle of chest compressions and rescue breathing.**
- Repeat the combination of 30 chest compressions and 2 rescue breaths, continuing to:
 - Release all pressure between compressions.
 - Watch the chest rise and fall during breaths.

- Continue this cycle until:**
- An AED arrives and is ready for use.
 - The victim begins to move, or
 - EMS personnel take over CPR.
