Climate Change 2021 - The Physical Science Basis Intergovernmental Panel on Climate Change (IPCC), 2023-07-26
The Working Group I contribution to the Sixth Assessment Report of the Intergovernmental Panel on Climate Change IPCC provides a comprehensive assessment of the physical science basis of climate change. It considers in situ and remote observations, paleoclimate information, understanding of climate drivers and physical, chemical, and biological processes and feedbacks, global and regional climate modelling, advances in methods of analyses, and insights from climate services. It assesses the current state of the climate, human influence on climate in all regions, future climate change, including sea level rise, global warming effects, including extremes, climate information for risk assessment, and regional adaptation, limiting climate change by reaching net zero carbon dioxide emissions, and reducing other greenhouse gas emissions, and benefits for air quality. The report serves policymakers, decision makers, stakeholders, and all interested parties with the latest policy relevant information on climate change. U.S. Nuclear Regulatory Commission, 1980. *The Application of Multi-omics Analysis in Translational Medicine*. HaiHui Huang, Madhu Chetty, 2026-01-06. Multi-omics analysis has emerged as a powerful approach in translational medicine, integrating diverse molecular data to provide a comprehensive understanding of biological systems and disease mechanisms. This Research Topic aims to explore the latest advancements and applications of multi-omics analysis in bridging the gap between basic research and clinical practice. In recent years, technological breakthroughs have enabled the simultaneous profiling of multiple molecular layers, including genomics, transcriptomics, proteomics, metabolomics, and epigenomics. The integration of these diverse data types offers unprecedented insights into complex biological processes and disease pathogenesis. Translational medicine seeks to leverage these insights to improve patient outcomes through more precise diagnostics, prognostics, and therapeutic strategies. Despite the potential of multi-omics approaches, several challenges persist in their application to translational medicine. These include data integration and interpretation, handling high-dimensional datasets, identifying clinically relevant biomarkers, and translating molecular findings into actionable clinical insights. Additionally, standardization of multi-omics protocols, data analysis pipelines, and reporting methods is crucial for reproducibility and clinical implementation. This Research Topic will address these challenges and explore innovative solutions in the field of multi-omics analysis for translational medicine. We welcome contributions that advance our understanding of multi-omics applications in various aspects of healthcare and biomedical research. Themes of interest include but are not limited to: 1. Novel computational methods for integrating multi-omics data. 2. Machine learning and artificial intelligence approaches in multi-omics analysis. 3. Multi-omics strategies for biomarker discovery and validation. 4. Applications of multi-omics in precision medicine and personalized therapy. 5. Multi-omics approaches in drug discovery and development. 6. Integration of clinical data with multi-omics profiles. 7. Single-cell multi-omics technologies and their

translational applications 8 Multi omics studies in complex diseases e g cancer cardiovascular diseases neurodegenerative disorders 9 Longitudinal multi omics profiling for disease progression and treatment response 10 Standardization and quality control in multi omics data generation and analysis 11 Ethical considerations and challenges in multi omics research and clinical implementation 12 Multi omics approaches in understanding drug resistance and developing combination therapies 13 Integration of microbiome data with host multi omics profiles 14 Systems biology approaches leveraging multi omics data for network analysis and pathway discovery By exploring these themes this Research Topic aims to showcase cutting edge research and foster discussions on the transformative potential of multi omics analysis in translational medicine We invite researchers clinicians and bioinformaticians to contribute their latest findings methodologies and perspectives to advance this rapidly evolving field Note This Research Topic is listed in multiple journal sections Translational Medicine only deals with manuscripts where applications of bioinformatics studies in clinic is presented We recommend submitting a manuscript summary to ensure your manuscript is submitted to the correct section
