

Advances in Medical Linear Accelerator Technology

Lucky for one young cancer patient in 1956 that Henry Kaplan, had already come to Stanford with an unusual goal to turn a device used by the physicists on campus—the linear accelerator LINAC-2—into a tool for fighting cancer. That patient, a 2-year-old boy suffering from a tumor in his eye, was the first to undergo X-ray treatment from a medical linear accelerator that Kaplan developed with campus physicists. The treatment saved the child's sight and he lived the rest of his life with his vision intact.

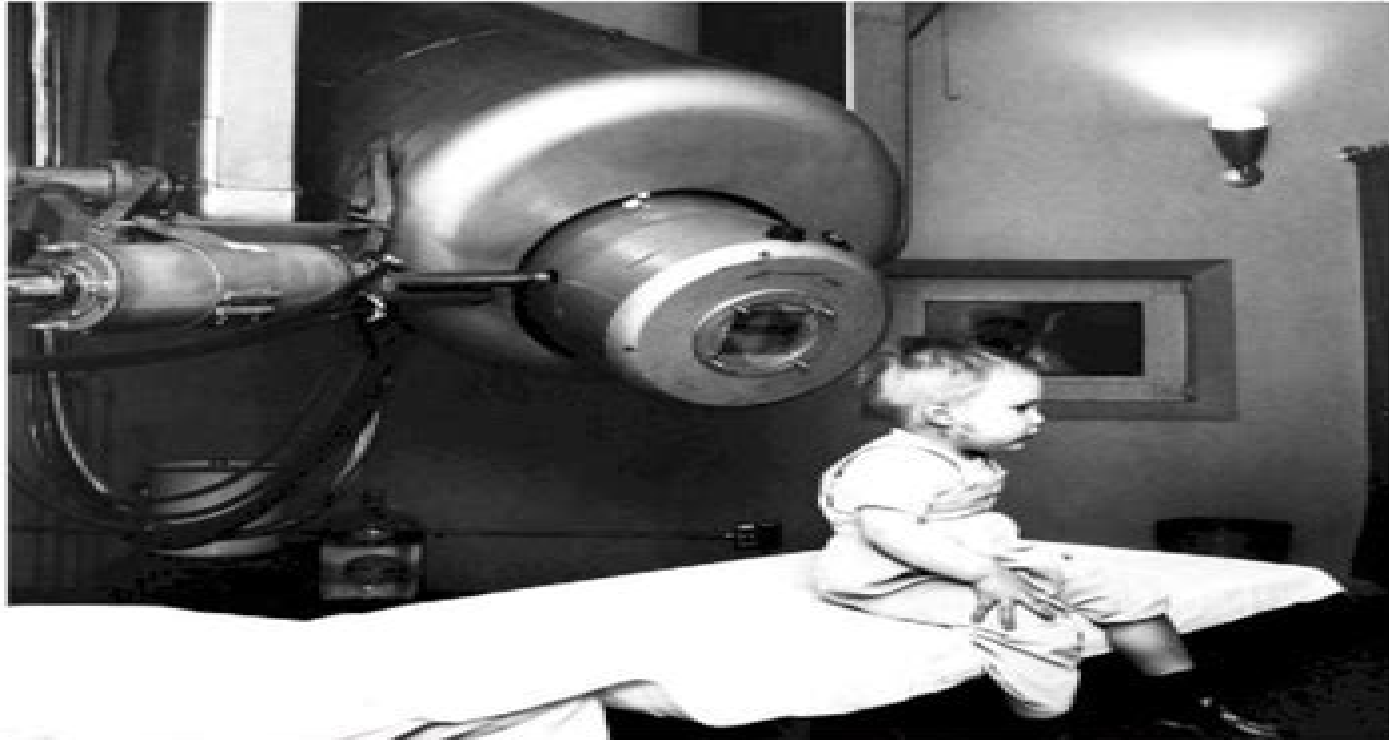

Figure – 1, The first patient to receive radiation therapy from the Medical Linear Accelerator

It all came about because Kaplan thought he could find a way to focus intense X-rays to destroy a tumor without harming surrounding healthy tissues—and he thought the physicists would be the ones to help him do so. "In the 1950s, I began to hear cocktail party conversations about an interesting new *atom smasher* being developed on the campus by Bill Hanson and Edward Ginzton and their colleagues," Kaplan recalled in an 1983 interview, the year before his death.
