Advances in Network Analysis and its Applications Evangelos Kranakis, 2012-10-23 As well as highlighting potentially useful applications for network analysis this volume identifies new targets for mathematical research that promise to provide insights into network systems theory as well as facilitating the cross fertilization of ideas between sectors Focusing on financial security and social aspects of networking the volume adds to the growing body of evidence showing that network analysis has applications to transportation communication health finance and social policy more broadly It provides powerful models for understanding the behavior of complex systems that in turn will impact numerous cutting edge sectors in science and engineering such as wireless communication network security distributed computing and social networking financial analysis and cyber warfare The volume offers an insider's view of cutting edge research in network systems including methodologies with immense potential for interdisciplinary application The contributors have all presented material at a series of workshops organized on behalf of Canada's MITACS initiative which funds projects and study grants in mathematics for information technology and complex systems These proceedings include papers from workshops on financial networks network security and cryptography and social networks MITACS has shown that the partly ghettoized nature of network systems research has led to duplicated work in discrete fields and thus this initiative has the potential to save time and accelerate the pace of research in a number of areas of network systems research *Algorithms and Models for the Web Graph* Megan Dewar, Paweł Prałat, Przemysław Szufel, François Thériberge, Małgorzata Wrzosek, 2023-05-15 This book constitutes the proceedings of the 18th International Workshop on Algorithms and Models for the Web Graph WAW 2023 held in Toronto Canada in May 23-26 2023 The 12 Papers presented in this volume were carefully reviewed and selected from 21 submissions The aim of the workshop was understanding of graphs that arise from the Web and various user activities on the Web and stimulate the development of high performance algorithms and applications that exploit these graphs
