Aufderheide, 2003 The fact that bodies decay after death has concerned humans throughout the ages. Many cultures have attempted to arrest this decay so that bodies are preserved or mummified in a state as near to life as possible, but spontaneously mummified bodies are also found. Mummies are being studied increasingly to answer questions about the health, social standing, and beliefs of the population from whence they came, and the lessons that they have for modern populations. Originally published in 2003, this authoritative reference work explores why people mummify bodies and the mechanisms by which they are preserved, details study methods, and surveys the myriad examples that can be found worldwide. It evaluates the use and abuse of mummified bodies throughout the ages and how mummified remains can be conserved for the future. Lavishly illustrated, *The Scientific Study of Mummies* will be of value to all those interested in paleopathology, archaeology, and anthropology. **The Other Side of Zen** Duncan Ryūken Williams, 2005 Popular understanding of Zen Buddhism typically involves a stereotyped image of isolated individuals in meditation, contemplating nothingness. This book presents the other side of Zen by examining the movement's explosive growth during the Tokugawa period (1600-1867) in Japan and by shedding light on the broader Japanese religious landscape during the era. Using newly discovered manuscripts, Duncan Ryūken Williams argues that the success of Soto Zen was due neither to what is most often associated with the sect—Zen meditation—nor to the teachings of its medieval founder, Dogen, but rather to the social benefits it conveyed. Williams's work is based on careful examination of archival sources, including temple logbooks, prayer and funerary manuals, death registries, miracle tales of popular Buddhist deities, secret initiation papers, villagers' diaries, and fundraising donor lists.
