

Materials

- Alcohol or a bottle
- Vegetable Oil
- Water
- Food Coloring
- Alka-Seltzer

What You Do

- Step 1: Fill the bottle with water.
- Step 2: Fill the rest of the bottle with oil.
- Step 3: Add a few drops of food coloring.
- Step 4: Break an Alka-Seltzer tablet into pieces and drop them into the bottle. It will start to bubble and the oil will move up and down.

How to Make a Lava Lamp

What Happened:

A lava lamp works because of two different scientific principles: density and polarity.

Density is the measurement of how compact a substance is. The denser it is, the more it will sink.

If you mix oil and water, you'll find that the water is heavier than the oil. Water is heavier than oil, so it will sink to the bottom of the oil.

Adding food coloring and water will create a mixture. However, water molecules are "polar" because they have a positive electrical charge and a negative electrical charge.

Oil molecules, however, are non-polar. They don't have a positive charge, so they are not attracted to the water molecules at all. This is why oil and water don't mix. Instead of mixing, a light color is made. The water and oil will separate. The water will sink to the bottom, and the oil will float on top. The food coloring will move to the water. The water will sink to the bottom, and the oil will float on top. The food coloring will move to the water. The water will sink to the bottom, and the oil will float on top. The food coloring will move to the water.
