 output Assessment of cardiac output and peripheral pulse Haemodynamics flow pressure and resistance The endothelial cell
 The microcirculation and solute exchange Circulation of fluid between plasma interstitium and lymph Vascular smooth
 muscle excitation contraction and relaxation Control of blood vessels I Intrinsic control Control of blood vessels II Extrinsic
 control by nerves and hormones Specialization in individual circulations Cardiovascular receptors reflexes and central
 control Co ordinated cardiovascular responses Cardiovascular responses in pathological situations The aim of this collection
 of over 230 questions is to offer students an element of self assessment as they progress through the companion book or
 revise for examinations Lecturers may find some of the questions useful as a template when setting questions of their own
 but should note that the questions are primarily educational in intent their discriminatory power has not been tested The
 questions are grouped under the same headings as the chapters of the companion textbook so they become progressively
 more advanced see Contents Occasional statements call for information from later chapters Medically relevant questions are
 introduced wherever they are appropriate I have set at least one question on each learning objective given at the start of the
 chapter in the companion volume to help you assess your achievement of the learning objectives Some questions require you
 to integrate information from other chapters too The questions aim to test basic understanding fundamental principles and
 medical relevance Hopefully they avoid excessive detail always the examiner s easy option The questions Most of the
 questions are multiple choice questions MCQs generally with five true false statements but occasionally more or less than
 five Although some educationalists now demand single correct answer questions SAQs one correct answer out of four or five
 options these test less knowledge so the MCQ style has been retained here To add variety there is a sprinkling of other styles
 of question such as extended matching questions i e choose the best answer from a list data interpretation problems and
 little numerical problems that test reasoning power and ability to do simple calculations The answers Each answer is
 accompanied by a brief explanation and very often an illustrative figure which should help if you got the answer wrong Most
 of the figures are from the accompanying textbook but there are also new explanatory diagrams after some questions It is

sometimes difficult to avoid ambiguity in MCQ questions so use your common sense choose the answer that will be right most of the time rather than a remote rare possibility Nevertheless if you disagree with the official answer do let me know
