Department of Civic Design, 1961 *Land and the City* Philip Kivell, 1993 In the rapidly changing sphere of urban development land is shown to provide the basic morphological structure of the city but also the source of economic and social power and the key to planning through examples from around the world **Land Use in an Urban Environment**, 1961 **Advancements in Urban Environmental Studies** Atiqur Rahman, Shouraseni Sen Roy, Swapan Talukdar, Shahfahad, 2023-03-03 According to UN estimates approximately nearly half of the world's population now lives in cities and that figure is expected to rise to almost 70% by 2050 Cities now account for around 70% of worldwide greenhouse gas emissions and this percentage is predicted to rise in the near future as a result of projected increases in global urbanization patterns It is widely acknowledged that irrational urban planning and design can increase emissions while also exacerbating threats and risks resulting in a slew of environmental issues such as urban heat islands air pollution flooding amongst other issues as well as environmental social and economic losses Therefore these concerns must be addressed promptly in order to cope up with these rising difficulties and make urban environments safer for residents With the advancement of remote sensing technology and the use of current remote observation systems urban data science remote sensing and artificial intelligence AI modeling and quantifying emergent difficulties in urban regions and urban systems have become easy They aid in the quantitative analysis of urban shape functions and human behavior in cities Harvesting data developing models and suggesting new methodologies will be aided by combining urban ecology with new breakthroughs in data science This book is of great value to a diverse group of academicians scientists students environmentalists meteorologists urban planners remote sensing and GIS experts with a common interest in geospatial sciences within the earth environmental sciences as well as human and social sciences The Security of Water, Food, Energy and Liveability of Cities Basant Maheshwari, Ramesh Purohit, Hector Malano, Vijay P. Singh, Priyanie Amerasinghe, 2014-06-13 The population of cities around the world is growing at an alarming rate and as a result the landscapes of most cities are going through enormous changes In particular fertile agricultural lands at the periphery of cities are being developed without consideration of holistic planning As such peri urban areas zones of transition from rural to urban land uses located between the outer limits of the urban and the rural environment are experiencing significant losses of agricultural land increased runoff and water quality degradation Concurrently the demands for water food and energy are increasing within cities and unless a balance is struck the liveability of these cities will soon be compromised The current water and land use changes have serious consequences on lifestyle environment health and overall well being of urban communities This book therefore helps readers to understand the current issues and challenges and examines suitable strategies and practices to cope with current and future pressures of urbanisation and peri urban land use changes The book examines a number of critical aspects in relation to the future of cities and peri urban regions including

the suitability of policies and institutions to sustain cities into the future impact of current trends in land use change population increase and water demand long term planning needs and approaches to ensure the secured future for generations ahead and strategies to adapt the cities and land uses so that they remain viable and liveable The readership of the book will include policy makers urban planners researchers post graduate students in urban planning and environmental and water resources management and managers in municipal councils
