Wolfgang Guggemos

0455 22 May June 2014:

Taking a hands-on approach: Current perspectives on the effect of hand position on vision Philip Tseng, Christopher Davoli, 2015-10-05 An exciting new line of research that investigates the impact of one's own hands on visual processing has flourished in the past several years. Specifically several studies have demonstrated that objects near the hands receive prioritized attention enhanced perceptual sensitivity altered figure ground assignment prolonged and detail oriented processing and improved visual working memory. Taken together these results demonstrate that the visual system reveals a new pattern of processing when one's hands are in proximity of viewed objects. Therefore the vast majority of studies on visual processing in which one's hands are kept away from the stimuli may constitute but one side of a more complex story of the inner workings of the visual system. With several consistent behavioral demonstrations of hand altered vision now in the literature the present challenge facing this growing field and the aim of this Research Topic is four pronged 1 Isolate and elucidate the underlying cognitive and neural mechanisms of hand altered vision 2 Map the parameters and conditions of hand nearness that permit prevent the onset or maintenance of hand altered vision 3 Determine the consequences of hand altered vision for higher level cognition and assess its applied potential e.g. as a neuropsychological intervention and 4 Present a cohesive and predictive theoretical account of hand altered vision. We welcome submissions that fit into any one or a combination of the above domains. For behavioral research we particularly encourage submissions that are relevant to the advancement of our understanding of the neural mechanisms of hand altered vision e.g. demonstrations that might corroborate or disconfirm proposed neural systems

Ways of Being James Bridle, 2022-04-07 Heady exhilarating often astonishing New York Times. Iridescently original deeply disorientating and yet somehow radically hopeful worth reading and rereading Brian Eno Be prepared to re evaluate your relationship with the amazing life forms with whom we share the planet. Fascinating innovative and thought provoking I thoroughly recommend Ways of Being Dr Jane Goodall DBE Recent years have seen rapid advances in artificial intelligence which increasingly appears to be something stranger than we ever imagined. At the same time we are becoming more aware of the other intelligences which have been with us all along unrecognized. These other beings are the animals plants and natural systems that surround us and are slowly revealing their complexity and knowledge just as the new technologies we've built are threatening to cause their extinction and ours. In Ways of Being writer and artist James Bridle considers the fascinating uncanny and multiple ways of existing on earth. What can we learn from these other forms of intelligence and personhood and how can we change our societies to live more equitably with one another and the non human world. From Greek oracles to octopuses forests to satellites Bridle tells a radical new story about ecology technology and intelligence. We must they argue expand our definition of these terms to build a meaningful and free relationship with the non human one based on solidarity and cognitive diversity. We have so much to learn and many worlds to gain
