

**Objectivity: An Introduction**

Students demonstrate an understanding of engineering problem-solving techniques simply from the knowledge already provided by learning the principles of thermodynamics. The key to understanding the introduction of design is to present the primary responsibility of an engineer. The typical engineering culture is to design, and design is the process of the synthesis that creates a design goal, followed by finding the solution. Design is the synthesis that creates the system described in the given design, and it is the responsibility of a designer to determine if a solution is possible. In this design-oriented culture, the synthesis process of engineering is the goal, and the thermodynamics system analysis is the validation of the design for system feasibility. In this design-oriented culture, design is the right-most part of the process, leading to the final solution.

The next objective of the design process is to create a design that is feasible. The design process is the synthesis that creates the design for the system.
