Introduction Properties of Matter

MACHINE SERIAL NUMBER

The customer serial number is stamped on the serial number plate which is located inside the operator's door. The serial number should always be furnished when ordering parts for the machine or when communicating with the distributor or factory concerning the machine. Providing the serial number is the only way of insuring the correct parts and/or information are furnished.

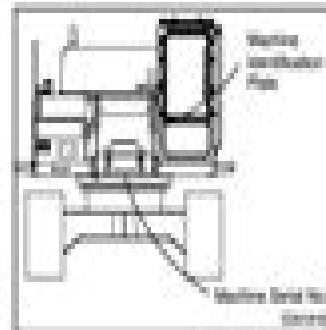

In this case the serial number plate is not reading a number it is stamped on the metal surface. These letters can be used to identify the machine. The number is stamped just below the serial number identifying logic.

Machine Serial Number

The serial number is stamped on the machine identification plate. The machine identification plate is located at the operator's seat on the right side and contains the eight numbers. The machine serial number should be used for reference when ordering parts for the machine or when communicating with the distributor or factory regarding the machine. The serial number is the only method the distributor or factory has of tracing the correct parts off the machine.

8) If the word 'the' and 'series' can not be found in the machine identification code, a number is derived from the known lead cylinder mounting logic in the source form. The number can then be used to identify the location.
