This fifth edition revises the classical topics of the vehicle electrical systems such as system architecture, control components and sensors. There is now greater detail on electronics and their application in the motor vehicle including electrical energy management (EEM) and discusses the topic of inter system networking within the vehicle. It also includes a description of the concept of hybrid drive, a topic that is particularly current due to its ability to reduce fuel consumption and therefore CO<sub>2</sub> emissions. This book will benefit automotive engineers and design engineers, automotive technicians in training and mechanics and technicians in garages. It may also be of interest to teachers, lecturers and students at vocational colleges and enthusiasts.
