**Cell adhesion molecules in neural development and disease** Zsolt Lele, Robert Hindges, 2023-02-09      **Neural and Synaptic Defects in Autism Spectrum Disorders** Hansen Wang, Laurie C. Doering, 2015-07-07      Autism spectrum disorders ASDs are a group of genetically and clinically heterogeneous neurodevelopmental disorders characterized by impaired reciprocal social interactions and communication and restricted and repetitive patterns of behaviors and interests. Studies in genetics, neurobiology and systems biology are providing insights into the pathogenesis of ASDs. Investigation of neural and synaptic defects in ASDs not only sheds light on the molecular and cellular mechanisms that govern the function of the central nervous system but may lead to the discovery of potential therapeutic targets for autism and other cognitive disorders. Our Research Topic, which constitutes this e-book, documents the recent development and ideas in the study of pathogenesis and treatment of ASDs with an emphasis on syndromic disorders such as fragile X and Rett syndromes. In addition, model systems and methodological approaches with translational relevance to autism are covered herein. We hope that the Research Topic will enhance the global knowledge base in the autism research community and foster new research directions in autism-related biology.

Spanu, Ralph Panstruga, 2017-04-20      Throughout their life, plants interact with all sorts of microbes. Some of these are detrimental and cause disease, some are mutually beneficial for both partners. It is clear that most, if not all, of the interactions are regulated by highly complex checks and balances, sustained by signalling and exchange of messengers and nutrients. The interactions where both partners are alive for a significant part of their time together are called biotrophic. In this e-book, we bring together 33 articles representing the current state of the art in research about diverse biotrophic plant-microbe associations, aimed at describing and understanding how these complex and ubiquitous partnerships work and ultimately support much of the land-based biosphere.
