*Mobile Learning and Mathematics* Helen Crompton, John Traxler, 2015-02-11 *Mobile Learning and Mathematics* provides an overview of current research on how mobile devices are supporting mathematics educators in classrooms across the globe. Through nine case studies, chapter authors investigate the use of mobile technologies over a range of grade levels and mathematical topics while connecting chapters provide a strong foundational background in mobile learning theories, instructional design, and learner support. For current educators, *Mobile Learning and Mathematics* provides concrete ideas and strategies for integrating mobile learning into their mathematics instruction, for example by sharing resources that will help implement Common Core State Standards or by streamlining the process of selecting from the competing and often confusing technology options currently available. A cutting edge research volume, this collection also provides a springboard for educational researchers to conduct further study. *MSCEIS 2019* Lala Septem Riza, Eka Cahya Prima, Toni
