Follow These Life-saving Steps To Safely Perform CPR In Emergencies

1

**Step 1: Observe the situation and attempt to wake the victim**

- Ensure the scene is safe. Do not put yourself in danger.
- If the victim appears to have been strangled, do not touch them.
- If it is safe, gently tap the victim and ask, "Are you all right?"
- Do not shake the victim if you suspect a head or neck injury.

2

**CALL  
911**

**Step 2: If the victim is unresponsive or not breathing**

- Have a bystander call 911, or call yourself if no bystanders are present, and immediately perform the first step.
- If possible, put the phone or speaker to the telephone earpiece with 1. Checking for breathing, 2. Calling your provider location, 3. Providing directions on performing CPR.
- If the victim responded to a shout or makes medical movements, a bystander must call 911 and check the victim's condition frequently.

3

— If you do not suspect a head or neck injury:  
Place the victim on a firm, flat surface facing up.  
If the victim is face down, turn them onto their side.  
Turn the victim onto their back.

**Step 3: Immediately begin chest compressions**

- Locate the center of the胸骨 (breastbone) by finding the jugular vein between the nipples.
- Place the heel of one hand and index finger that lies, then place the heel of the second hand on top, overlapping the hands.
- Depress your arms, lock your elbows, and keep your shoulders over directly above your hands.
- Using the heels of your hands, push firmly straight down about 2 inches but no more than 2-4 inches on the chest.
- Release pressure completely between pushes, keeping your hands off the chest at all times.
- Allow the chest to return to its normal position after each compression.
- Avoid leaning on the chest between compressions.
- Count aloud "One and two and three..."
- Push hard and fast, pushing for a rate of 100 to 120 compressions per minute.

## IF TRAINED IN CPR

If you are not trained in CPR or are uncomfortable with rescue breaths, skip steps 4 and 5 and continue chest compressions at a rate of 100 to 120 compressions per minute until:

- An AED arrives and is ready for use,
- The victim starts to move, or
- Emergency personnel take over.

4

**Step 4: After 30 compressions — give the breath**

- Open the airway by placing one hand on the victim's forehead and the other hand under the victim's chin, gently tilting the head back (head tilt chin lift method).
- This action is not breathing or only partially prepared to Step 5 for rescue breathing.

5

**Step 5: Begin rescue breathing after 30 compressions**

- Maintain the open airway.
- Pinch the victim's nose shut and cover the mouth with yours, creating an airtight seal (or use a mouth guard).
- If you use an AED, allow rescue breaths. If the AED places itself over your mouth and nose, the AED is in use.
- Give a regular (not deep) breath between each rescue breath to avoid overbreathing or hyperventilation.
- After the breath, tilt their head and neck and perform the head tilt chin lift again before giving the next breath.

6

**Step 6: Repeat the cycle of chest compressions and rescue breaths**  
Repeat the combination of 30 chest compressions and 2 rescue breaths, continuing to:

- Perform 30 percent faster compressions.
- Watch the chest rise and fall during breaths.

Continue this cycle until:

- An AED arrives and is ready for use.
- The victim begins to move on.
- Emergency personnel take over CPR.
