Lesh, 2012-10-12 The Handbook of Research Design in Mathematics and Science Education is based on results from an NSF supported project REC 9450510 aimed at clarifying the nature of principles that govern the effective use of emerging new research designs in mathematics and science education A primary goal is to describe several of the most important types of research designs that have been pioneered recently by mathematics and science educators have distinctive characteristics when they are used in projects that focus on mathematics and science education and have proven to be especially productive for investigating the kinds of complex interacting and adapting systems that underlie the development of mathematics or science students and teachers or for the development dissemination and implementation of innovative programs of mathematics or science instruction The volume emphasizes research designs that are intended to radically increase the relevance of research to practice often by involving practitioners in the identification and formulation of the problems to be addressed or in other key roles in the research process Examples of such research designs include teaching experiments clinical interviews analyses of videotapes action research studies ethnographic observations software development studies or curricula development studies more generally and computer modeling studies This book's second goal is to begin discussions about the nature of appropriate and productive criteria for assessing and increasing the quality of research proposals projects or publications that are based on the preceding kind of research designs A final objective is to describe such guidelines in forms that will be useful to graduate students and others who are novices to the fields of mathematics or science education research The NSF supported project from which this book developed involved a series of mini conferences in which leading researchers in mathematics and science education developed detailed specifications for the book and planned and revised chapters to be included Chapters were also field tested and revised during a series of

doctoral research seminars that were sponsored by the University of Wisconsin's OERI supported National Center for Improving Student Learning and Achievement in Mathematics and Science. In these seminars computer based videoconferencing and www based discussion groups were used to create interactions in which authors of potential chapters served as guest discussion leaders responding to questions and comments from doctoral students and faculty members representing more than a dozen leading research universities throughout the USA and abroad. The Handbook of Peer Tutoring Russ Hodges, Daniel Sanford, Michelle Steiner, 2025-10-16 The Handbook of Peer Tutoring is the authoritative resource on the emerging interdisciplinary field of peer tutoring in higher education. Addressing the multiple audiences of undergraduate tutors in advanced trainings, students immersing themselves in the research of learning and writing centers, professionals seeking to understand the history and current state of the field, and researchers specializing in peer led learning, the book gathers in one volume the voices that define the current state of the field. In doing so it brings authors and ideas from previously discrete areas of study: learning centers, writing centers, the scholarship of teaching and learning, communication, composition, developmental education, psychology, and others into conversation with one another and advances the case for a single shared scholarship of post secondary peer tutoring that spans numerous disciplines, professional communities and continents. Each contribution establishes the state of the research with a respect to a specific question or topic and proposes directions for future research. Collectively the volume
