way into clinical trials For instance for the USA the NIH website in early 2004 displayed 38 clinical studies involving either pro or antiangiogenic therapies Given the expected overwhelming wealth of clinical data the question may be asked whether further exploration of biological mechanisms is required or whether results from the bedside are instructive enough to proceed This question depends also on the progress of pro and antiangiogenic clinical trials In the following I give a short overview about some of the progress that has been made in this field Since Judah Folkman proposed antiangiogenic tumor therapy thirty years ago it has become increasingly evident that agents which interfere with blood vessel formation also block tumor progression Accordingly antiangiogenic therapy has gained much attention as a potential adjunct to conventional cancer therapy
