Systems Biology: Simulation of Dynamic Network States Bernhard Ø. Palsson, 2011-05-26 Biophysical models have been used in biology for decades but they have been limited in scope and size In this book Bernhard Palsson shows how network reconstructions that are based on genomic and bibliomic data and take the form of established stoichiometric matrices can be converted into dynamic models using

metabolomic and fluxomic data The Mass Action Stoichiometric Simulation MASS procedure can be used for any cellular process for which data is available and allows a scalable step by step approach to the practical construction of network models Specifically it can treat integrated processes that need explicit accounting of small molecules and protein which allows simulation at the molecular level The material has been class tested by the author at both the undergraduate and graduate level All computations in the text are available online in MATLAB and Mathematica workbooks allowing hands on practice with the material

Systems Biology Bernhard Palsson, 2011 Master the process of building MASS models with real examples and hands on practice

Modeling of Dynamic Systems Lennart Ljung, Torkel Glad, 1994 Written by a recognized authority in the field of identification and control this book draws together into a single volume the important aspects of system identification AND physical modelling

KEY TOPICS Explores techniques used to construct mathematical models of systems based on knowledge from physics chemistry biology etc e g techniques with so called bond graphs as well those which use computer algebra for the modeling work Explains system identification techniques used to infer knowledge about the behavior of dynamic systems based on observations of the various input and output signals that are available for measurement Shows how both types of techniques need to be applied in any given practical modeling situation Considers applications primarily simulation
