

8. You've sketched out plans for a new hydroelectric dam for a river nearby. If the dam is built, a reservoir would form above the dam, and water would flow through the turbine blades, generating electricity. Excess water would flow over the top of the dam.

When you present the sketch to your clients, they ask you to redesign the dam so there is more water pressure on the turbine blades. What's a good way to do this?

- A.  widen the intake opening
- B.  increase the diameter of the penstock
- C.  decrease the diameter of the penstock
- D.  increase the size of the outflow
- E.  add height to the top of the dam, so the water level in the reservoir is higher
