10842014 Physical Science:

Advances in Multimedia Information Processing – PCM 2018 Richang Hong, Wen-Huang Cheng, Toshihiko Yamasaki, Meng Wang, Chong-Wah Ngo, 2018-09-18 The three volume set LNCS 101164 11165 and 11166 constitutes the refereed proceedings of the 19th Pacific Rim Conference on Multimedia PCM 2018 held in Hefei China in September 2018 The 209 regular papers presented together with 20 special session papers were carefully reviewed and selected from 452 submissions The papers cover topics such as multimedia content analysis multimedia signal processing and communications and multimedia applications and services Analysis, Modeling and Stability of Fractional Order Differential Systems 1

Jean-Claude Trigeassou, Nezha Maamri, 2019-09-11 This book introduces an original fractional calculus methodology the infinite state approach which is applied to the modeling of fractional order differential equations FDEs and systems FDSs Its modeling is based on the frequency distributed fractional integrator while the resulting model corresponds to an integer order and infinite dimension state space representation This original modeling allows the theoretical concepts of integer order systems to be generalized to fractional systems with a particular emphasis on a convolution formulation **Analysis, Modeling and Stability of Fractional Order Differential Systems 2** Jean-Claude Trigeassou, Nezha Maamri, 2020-02-26 This book introduces an original fractional calculus methodology the infinite state approach which is applied to the modeling of fractional order differential equations FDEs and systems FDSs Its modeling is based on the frequency distributed fractional integrator while the resulting model corresponds to an integer order and infinite dimension state space representation This original modeling allows the theoretical concepts of integer order systems to be generalized to fractional systems with a particular emphasis on a convolution formulation With this approach fundamental issues such as system state interpretation and system initialization long considered to be major theoretical pitfalls have been solved easily Although originally introduced for numerical simulation and identification of FDEs this approach also provides original solutions to many problems such as the initial conditions of fractional derivatives the uniqueness of FDS transients formulation of analytical transients fractional differentiation of functions state observation and control definition of fractional energy and Lyapunov stability analysis of linear and nonlinear fractional order systems This second volume focuses on the initialization observation and control of the distributed state followed by stability analysis of fractional differential systems

Water-Energy-Nexus in the Ecological Transition Vincenzo Naddeo, Kwang-Ho Choo, Mohamed Ksibi, 2022-12-15 This volume includes selected contributions presented during the 3rd edition of the international conference on WaterEnergyNEXUS which was held in Tunisia in December 2020 This conference was organized by the University of Sfax Tunisia in cooperation with the Sanitary Environmental Engineering Division SEED of the University of Salerno Italy the Advanced Institute of Water Industry at Kyungpook National University Korea and The Energy and Resources Institute TERI India The WaterEnergyNEXUS series of conferences are supported by the UNESCO World Water Association Programme

WWAP and the International Water Association IWA It also enjoys the patronage of several international scientific societies associations and organizations and has established a publishing partnership with Springer Nature With the support of international experts invited as plenary and keynote speakers the conference aimed to give a platform for Euro Mediterranean countries to share and discuss key topics on such water energy issues through the presentation of nature based solutions advanced technologies and best practices for a more sustainable environment within the framework of the ecological transition This volume gives a general and brief overview of current research focusing on emerging Water Energy Nexus issues and challenges and their potential applications to various environmental problems impacting the Euro Mediterranean zone and surrounding regions A selection of novel and alternative solutions applied worldwide are included The volume contains over about one hundred carefully refereed contributions from 48 Countries worldwide selected for the conference Topics covered in the book include Nexus framework and governance Economic evaluations for investment projects in the water and energy sectors Innovation of renewable energies and challenges for the mitigation of climate change impact in the water energy food nexus Advanced technologies and nature based solutions for the environmental sustainability of the water sector Water and wastewater technologies for developing countries Green technologies for sustainable water and wastewater management Advanced technologies and nature based solutions in water cycle Control of hazardous substances and recovery of renewable valuable resources Renewable valuable resources for recovery and utilization Control of nutrients and hazardous compounds Energy saving technologies and future clean energy solutions Future urban energy systems with considerations of water and food security Environmental Biotechnology and Bioenergy Implementation and best practices This volume is also an invaluable guide for industry professionals and policymakers working in the water and energy sectors
