Leading PLCs at Work® Districtwide Robert Eaker, Mike Hagadone, Janel Keating, Meagan Rhoades, 2021-01-25

Ensure your school district is doing the right work the right way for the right reasons. With this resource as your guide you will learn how to align the work of every PLC team districtwide from the boardroom to the classroom. Each chapter focuses on one of four types of teams and provides practices and tools for working together to foster a districtwide culture of continuous improvement. Use this resource to align your district's work in a top down bottom up cyclical process. Learn the leadership role the district office plays in supporting successful PLC at Work implementation and school improvement efforts. Observe how collaborative teams at every level align their work districtwide to ensure high levels of learning in professional learning communities. Study real life examples and artifacts of best practices in action. Receive protocols and templates such as the Team Analysis of Common Assessment (TACA) form to move student learning forward. Review a process for establishing a guaranteed and viable curriculum and discover strategies for analyzing student learning and making data informed decisions.

[Designing Learning Environments for Developing Understanding of Geometry and Space](#) Richard Lehrer, Daniel Chazan, 2012-11-12

This volume reflects an appreciation of the interactive roles of subject matter teacher, student and technologies in designing classrooms that promote understanding of geometry and space. Although these elements of geometry education are mutually constituted, the book is organized to highlight first the editors vision of a general geometry education, second the development of student thinking in everyday and classroom contexts and third the role of technologies. Rather than looking to high school geometry as the locus and all too often the apex of geometric reasoning, the contributors to this volume suggest that reasoning about space can and should be successfully integrated with other forms of mathematics starting at the elementary level and continuing through high school. Reintegrating spatial reasoning into the mathematical mainstream indeed placing it at the core of K-12 mathematics environments that promote learning with understanding will mean increased attention to problems in modeling structure and design and reinvigoration of traditional topics such as measure, dimension and form. Further, the editors position is that the teaching of geometry and spatial visualization in school should not be compressed into a characterization of Greek geometry but should include attention to contributions to the mathematics of space that developed subsequent to those of the Greeks. This volume is essential reading for those involved in mathematics education at all levels including university faculty, researchers and graduate students.

Journal of Engineering Graphics, 1963 **Glencoe Mathematics**, 2001 **New York Math: Math B**, 2000 **Resources for Teaching Discrete Mathematics** Brian Hopkins, 2009

Hopkins collects the work of 35 instructors who share their innovations

and insights about teaching discrete mathematics at the high school and college level. The book's 9 classroom tested projects including building a geodesic dome come with student handouts, solutions and notes for the instructor. The 11 history modules presented draw on original sources such as Pascal's Treatise on the Arithmetical Triangle allowing students to explore topics in their original contexts. Three articles address extensions of standard discrete mathematics content. Two other articles explore pedagogy specifically related to discrete mathematics courses adapting a group discovery method to larger classes and using logic in encouraging students to construct proofs.
