Time Domain Electromagnetics Sadasiva M. Rao, 1999-07-26 Time Domain Electromagnetics deals with a specific technique in electromagnetics within the general area of electrical engineering This mathematical method has become a standard for a wide variety of applications for design and problem solving This method of analysis in electromagnetics is directly related to advances in cellular and mobile communications technology as well as traditional EM areas such as radar antennas and wave propagation Most of the material is available in the research journals which is difficult for a non specialist to locate read understand and effectively use for the problem at hand Only book currently available to practicing engineers

and research scientists exclusively devoted to this subject Includes contributions by the world s leading experts in electromagnetics Presents the most popular methods used in time domain analysis are included at one place with thorough discussion of the methods in an easily understandable style In each chapter many simple and practical examples are discussed thoroughly to illustrate the salient points of the material presented All chapters are written in a consistent style that allows the book to be of use for self study by professionals as well as for use in a graduate level course in electrical engineering

Landmark Papers on Photorefractive Nonlinear Optics Pochi Yeh,1995 This book intended for students researchers and engineers is a collection of classic papers on photorefractive nonlinear optics Included are landmark papers on fundamental photorefractive phenomena two wave mixing four wave mixing phase conjugators and resonators material growth and physics and applications in image processing optical storage and optical computing
