It was initially designed for measuring the ocean's topography with reference to an ellipsoid and for the determination of the marine geoid. Satellite altimetry has provided extremely valuable information on ocean science e.g. circulation, surface geostrophic currents, eddy structures, wave heights and the propagation of oceanic Kelvin and Rossby waves. With more than 25 years of observations, it is also becoming vital to climate research, providing accurate measurements of sea level variations from regional to global scales. Altimetry has also demonstrated a strong potential for geophysical, cryospheric and hydrological research and is now commonly used for the monitoring of Arctic and Antarctic ice sheet topography and of terrestrial surface water levels. This book aims to present reviews and recent advances of general interest in the use of radar altimetry in Earth sciences. Manuscripts are related to any aspect of radar altimetry technique or geophysical applications. We also encourage manuscripts resulting from the application of new altimetric technology SAR, SARin and Ka band and improvements expected from missions to be launched in the near future i.e. SWOT.      **Legal Services Commission Annual Report and Accounts 2007/08** Legal Services Commission,2008 With correction slip dated August 2008      **Indian Trade Journal** ,2006-10      *Mandell, Douglas, and Bennett's Principles and Practice of Infectious Diseases* John E.
