Journey Through Advanced Mathematics - Connecting More Than 60 Magic Tricks To High-level Math Ricardo V

Teixeira, Jang-woo Park, 2020-05-29 This delightful book connects mathematical concepts in a dozen areas to magic tricks. Expositions of the mathematics precede description and analysis of the tricks. The expositions are too short for in-depth learning; the intent is to give sophomores a taste of the content and ideas of later mathematics courses. Each chapter features exercises on the mathematics and students can have fun practicing the tricks. *Mathematics Magazine* Teixeira and Park present over 60 different magic tricks while introducing students to high-level math areas. Readers will learn really interesting ideas that will better prepare them for future courses and help them find areas they might want to study deeper. And as a side effect, students will learn amazing magic tricks, century-old secrets and details from famous magicians and mathematicians. The material was written to quickly present key concepts in several mathematical areas in a direct way. Little or no proficiency in math is assumed. In fact, students do not require any Calculus knowledge. And since chapters are almost independent from each other, this book also works as an introduction to several other courses. Topics covered include mathematical proofs, probability, abstract algebra, linear algebra, mathematical computing, number theory, coding theory, geometry, topology, real analysis, numerical analysis, and history of math. *Middle School Math Course 1* Se 1999c, 2000 A middle school math program consisting of three courses. Course 1 focuses on numerical reasoning, course two focuses on proportional reasoning, course 3 focuses on algebraic reasoning. Fair Isn't Always Equal Rick Wormeli, 2006 Differentiated instruction is a nice idea, but what happens when it comes to assessing and grading students? What's both fair and leads to real student learning? *Fair Isn't Always Equal* answers that question and much more. Rick Wormeli offers the latest research and common sense thinking that teachers and administrators seek when it comes to assessment and grading in differentiated classes. Filled with real examples and gray areas that middle and high school educators will easily recognize, Rick tackles important and sometimes controversial assessment and grading issues constructively. The book covers high-level concepts ranging from rationale for differentiating assessment and grading to understanding mastery as well as the nitty-gritty details of grading and assessment such as whether to incorporate effort, attendance, and behavior into academic grades, whether to grade homework, setting up grade books and report cards to reflect differentiated practices, principles of successful assessment, how to create useful and fair test questions including how to grade such prompts efficiently, whether to allow students to re-do assessments for full credit. This thorough and practical guide also includes a special section for teacher leaders that explores ways to support colleagues as they move toward successful assessment and grading practices for differentiated classrooms. *Connecting Science and Engineering Education Practices in Meaningful Ways* Leonard A.

Centering Humanism in STEM Education Bryan Dewsbury,Susannah McGowan,Sheila S. Jaswal ,Desiree Forsythe,2024-09-24 Research demonstrates that STEM disciplines perpetuate a history of exclusion particularly for students with marginalized identities This poses problems particularly when science permeates every aspect of contemporary American life Institutions repeated failures to disrupt systemic oppression in STEM has led to a mostly white cisgender and

male scientific workforce replete with implicit and or explicit biases Education holds one pathway to disrupt systemic linkages of STEM oppression from society to the classroom Maintaining views on science as inherently objective isolates it from the world in which it is performed STEM education must move beyond the transactional approaches to transformative environments manifesting respect for students social and educational capital We must create a STEM environment in which students with marginalized identities feel respected listened to and valued We must assist students in understanding how their positionality privilege and power both historically and currently impacts their meaning making and understanding of STEM
