Sustainable Use of Soils and Water Fernando António Leal Pacheco, 2020-04-30 This book presents the result of an innovative challenge to create a systematic literature overview driven by machine generated content Questions and related keywords were prepared for the machine to query discover collate and structure by Artificial Intelligence AI clustering The AI based approach seemed especially suitable to provide an innovative perspective as the topics are indeed both complex interdisciplinary and multidisciplinary for example climate planetary and evolution sciences Springer Nature has published much on these topics in its journals over the years so the challenge was for the machine to identify the most relevant content and present it in a structured way that the reader would find useful The automatically generated literature summaries in this book are intended as a springboard to further discoverability They are particularly useful to readers with limited time looking to learn more about the subject quickly and especially if they are new to the topics Springer Nature seeks to support anyone who needs a fast and effective start in their content discovery journey from the undergraduate student exploring interdisciplinary content to Master or PhD thesis developing research questions to the practitioner seeking support materials this book can serve as an inspiration to name a few examples It is important to us as a publisher to make the advances in technology easily accessible to our authors and find new ways of AI based author services that allow human machine interaction to generate readable usable collated research content **Sustainable Use of Soils and Water** Fernando António Leal Pacheco, 2020-04-30 This book on the sustainable use of soils and water addressed a variety of issues related to the utopian desire for environmental sustainability

and the deviations from this scene observed in the real world Competing interests for land are frequently a factor in land degradation especially where the adopted land uses do not conform with the land capability the natural use of soil The concerns of researchers about these matters are presented in the articles comprising this Special Issue book Various approaches were used to assess the imbalance between economic profit and environmental conservation in various regions in addition to potential routes to bring landscapes back to a sustainable status being disclosed
