Functions and Graphs I.M. Gelfand, E.G. Glagoleva, E.E. Shnol, 1990-12-01 The need for improved mathematics education at the high school and college levels has never been more apparent than in the 1990 s As early as the 1960 s I M Gelfand and his colleagues in the USSR thought hard about this same question and developed a style for presenting basic mathematics in a clear and simple form that engaged the curiosity and intellectual interest of thousands of high school and college students These same ideas this same content unchanged by over thirty years of experience and mathematical development are available in the following books to any student who is willing to read to be stimulated and to learn Functions and Graphs provides instruction in transferring formulas and data into geometrical form Thus drawing graphs is shown to be one way to see formulas and functions and to observe the ways in which they change This skill is fundamental to the study of calculus and other mathematical topics Teachers of mathematics will find here a fresh understanding of the subject and a valuable path to the training of students in mathematical concepts and skills

Instructor's Annotated Edition facilitates teaching. New An Instructor's Annotated Edition unlike any other offered for this course features reduced student text pages with special instructor resources in the margins: teaching tips, extra examples, ideas for reinforcing concepts, discussion suggestions, highlighted vocabulary and symbols, challenge problems, quizzes, suggested assignments, and references to transparencies that may be found both in the Instructor's Resource Manual and on the web site. New Side by Side Solutions pair an algebraic solution and a graphical representation to accommodate different learning styles. New Technology dependent modeling sections introduce the idea of mathematical modeling of data through linear, quadratic, exponential, logarithmic, and logistic regression. New Integrated web resources include selected Take Note boxes identified by a special web icon which direct students to an interactive example or a downloadable file on the web site. These special resources can be used by instructors for presentation purposes or can be assigned to students to help them visualize a concept. New Concept Lists now prominently feature all the major topics at the beginning of each section, preparing students for the concepts to follow. A wide range of applications, exercise sets, and supplemental exercises, many involving real data, encourage problem solving, skill building, group work, writing, and manipulation of graphing calculators. Exploring Concepts with Technology, a special end of chapter feature, expands on ideas introduced in the text by using technology to investigate extended mathematical applications or topics. Projects at the end of each exercise set are designed to encourage students or groups of students to research and write about mathematics and its applications. Additional Projects are included in the Instructor's Resource Manual and on the book's web site. Topics for Discussion, conceptual exercises included at the end of each section, can be used for discussion or writing assignments. Take Note and Math Matters, formerly called Point of Interest, margin notes alert students about interesting aspects of math history, applications, and points that require special attention.
