Iterative Algorithms For Multilayer Optimizing Control:

Iterative Algorithms for Multilayer Optimizing Control Mietek A. Brdys,Piotr Tatjewski,2005 The book presents basic structures concepts and algorithms in the area of multilayer optimizing control of industrial systems as well as the results of the research that was carried out by the authors over the last two decades The methodologies and control algorithms are thoroughly illustrated by numerous simulation examples Also the applications to several case study examples are presented These include ethylene distillation column vaporizer pilot scale plant styrene distillation line consisting of three columns and industrial furnace pilot scale plant A temporal decomposition is applied to the Integrated Wastewater System case study to derive multilayer dynamic optimizing controller with repetitive robust model predictive control mechanism distributed over the layers operating in different time scales

Hierarchical Control and Optimization

Strategies Applied to Solar Membrane Distillation Facilities Juan D. Gil,2023-04-13 This book offers a systematic study of control algorithms applied in the operation of solar membrane distillation SMD facilities After a short introduction to membrane distillation systems powered by solar energy it reports on the various stages of the development of a comprehensive operating strategy based on modelling control and optimization techniques which enables an improved operation of SMD plants helping the commercialization of the SMD technology A special focus of the research was to maximize the distillate production of the MD modules while reducing their thermal energy consumption being those two important weaknesses of the current technology as well as their minimizing operating costs The optimised operating strategies were tested in a real pilot plant located at Plataforma Solar de Almer a a dependency of the Centro de Investigaciones Energ ticas Medioambientales y Tecnol gicas CIEMAT of Spain All in all this thesis offers extensive information on control and modeling algorithms and on their practical applications in solar membrane distillation plants
