Photonica2015 Suzana Petrović,Goran Gligorić,Milutin Stepić,2016-03-24 **Geoinformatics and Atmospheric Science** Tomasz Niedzielski,Krzysztof Migala,2017-09-09 This volume presents recent developments in atmospheric sciences driven by numerical modeling which makes use of geospatial technologies and increasing computational power It gathers examples of how geoinformatics supports meteorological climatological and water related studies One of the most important features of geospatial technologies is that they provide methods and tools which may be utilized in real time or near real time in order to monitor and predict atmospheric processes This is particularly crucial in areas where dynamics of atmospheric phenomena is considerable and causes difficulties in accurate forecasting One of such areas is the transitional zone between oceanic and continental features of the mid latitude climate Good examples of investigations into the transitional zone come from Poland and its neighboring countries The topical volume provides the reader with a selection of papers on physically based and data based modelling of weather related phenomena over Poland This main theme of the topical volume is extended to cover case studies on the use of geoinformatics in atmospheric studies in other regions at a range of spatial scales

Pugno,2016-01-22 Atomistic simulations based on ab initio and semi empirical approaches are nowadays widespread in many areas of physics chemistry and more recently biology Improved algorithms and increased computational power widened the areas of application of these computational methods to extended materials of technological interest in particular allowing unprecedented access to the first principles investigation of their electronic optical thermodynamical and mechanical properties even where experiments are not available However for a big impact on the society this rapidly growing field of computational approaches to materials science has to face the unfavourable scaling with the system size and to beat the time scale bottleneck Indeed many phenomena such as crystal growth or protein folding for example occur in a space time scale which is normally out of reach of present simulations Multi scale approaches try to combine different scale algorithms along with matching procedures in order to bridge the gap between first principles and continuum level simulations This Research Topic aims at the description of recent advances and applications in these two emerging fields of ab initio and multi scale materials modelling for both ground and excited states A variety of theoretical and computational techniques are included along with the application of these methods to systems at increasing level of complexity from nano to micro Crossing the borders between several computational theoretical and experimental techniques this Research Topic aims to be of interest to

By bringing together hundreds of scientists, peer reviewers and collaborating institutions and partners the GEO reports build on sound scientific knowledge to provide governments, local authorities, businesses and individual citizens with the information needed to guide societies to a truly sustainable world by 2050. GEO 6 outlines the current state of the environment, illustrates possible future environmental trends and analyses the effectiveness of policies. This flagship report shows how governments can put us on the path to a truly sustainable future emphasising that urgent and inclusive action is needed to achieve a healthy planet with healthy people. House of Commons, 1875 **Experimental Nuclear Physics** Emilio Segrè, 1953 At the end of World War II many physicists who had been mobilized for the war effort returned to university work and to pure research a great number of them had worked on nuclear problems and were anxious to resume investigations in this field Moreover there was a large influx of students eager to start nuclear investigations The need was keenly felt for a book which would bring the experimentalist up to date in experimental techniques point out to him the significant facts and data and indicate the broad lines of theoretical interpretation It was immediately apparent that the field of nuclear physics had grown so much and the various branches had become so specialized that no one person could hope to write a book like the famous treatises of Rutherford which however because of the evolution mentioned above had by 1930 already become Rutherford Chadwick and Ellis Curie and Kohlrausch A cooperative effort like the Geiger Scheel *Handbuch der Physik* seemed the only solution Individual authors could undertake to prepare reasonably complete treatises on a restricted field in which they are quite authoritative By keeping the discussions relatively short it became possible for a group of authors to cooperate without curtailing their research activity An incentive for several of the indeed was the desire to read the contributions of the others
