**Numerical and experimental investigations of distribution of gaseous emissions with the air flow in the indoor environment** Umer Afzal, 2017 There are many sources of emissions produced by burning fuel for power or heat through chemical reactions and from leaks from industrial processes or equipment There is always a possibility of a potential hazard when these gases enter into the indoor environment with the air flow The determination of the concentration profiles are necessary to evaluate the potential hazard posed by the gas spread The main objectives of this work are to develop an appropriate measurement methodology and a 3D CFD transient multicomponent simulation model for the determination of spatial and temporal distribution of gaseous emissions with the air flow in the indoor environment This work is also aimed at comparing the numerical simulation results of different CFD programs for a 2D base case model of indoor air flow with and without emission source under laminar and turbulent flow conditions for the purpose of developing a better basic understanding of the physical phenomena and for the selection of the suitable and appropriate CFD program for the further development of the simulation model One of the goals is also to apply the developed simulation model to the loss prevention and risk mitigation in the indoor environment and to study the influence of different parameters on the concentration distribution of gaseous pollutants in the presence of air flow in the indoor environment to minimize the expensive and time consuming experimentation efforts

**8th International Conference on Bioinformatics and Biomedical Engineering (iCBBE)**, 2014-09-17 It is my great pleasure to present the proceedings of the 8th International Conference on Bioinformatics and Biomedical Engineering ICBBE 2014 held in Suzhou China September 20-22, 2014 I would like to take this opportunity to express my sincere thanks to all the authors and participants for their support to our conference The continuous researches on Bioinformatics and Biomedical Engineering are now of critical significance to the sustainable development of science education culture and the society Especially in modern times it plays an important role in the interdisciplinary field among the life science mathematical science computer science and electronic information science More and more scholars and practitioners both within China and abroad are committed themselves to the cause of this area With the development of society and technology a great variety of research results are emerging Here ICBBE provides a platform for academic professionals and industry players to exchange the most updated information and achievements in those exciting research areas On behalf of the organizing committee I would like to express my gratitude to our sponsors Wuhan University and Engineering Information Institute At the same time we appreciate the contribution from all the paper reviewers and the committee members It is impossible to organize such a conference without their help The papers in the proceedings of ICBBE provide details beyond what is possible to be included in an oral presentation and constitute a concise but timely medium for the dissemination of recent research results I hope that you can find these proceedings interesting exciting and informative Thanks again for your support to the ICBBE conference Prof Kuo Chen Chou ICBBE 2014 Committee
